Alfresco for Government

The Alfresco platform delivers solutions that align people, processes and technology to overcome challenges and solve mission-essential problems by improving performance and program delivery in key business areas.

- Content Management
- Business Process Management
- Records Management
- Task & Workflow Management
- Case Management
- Digital Media Management

Transformation

Alfresco helps agencies and departments harness the power of digitization, automation and cloud and open source technologies to meet their essential mission and business needs. Agencies at all tiers of government use Alfresco to modernize operations, work smarter and more collaboratively, and achieve breakthrough efficiency.

Lower Total Cost of Ownership (TCO)

Governments can do more with less by phasing out paper-based practices, streamlining business processes, and leveraging low-cost cloud infrastructure. Alfresco delivers the only open source platform—which combines ECM, BPM, and RM functionalities—to deliver a complete, enterprise-wide solution that eliminates the need to purchase and support discrete point solutions from multiple vendors, saving government customers tens of millions of dollars.

Solutions Delivered at the intersection of ECM, BPM and RM

ECM · BPM · Solutions · RM DoD 5015.02

- Decision Ready Data
- Digital Evidence Management
- Email Records Management
  - Office 365 and Sharepoint Migrations
- FOIA Management
- Health Claims Tracking
- Investigative Case Management
- Judicial Appeals
- Tasking & Workflow Management

Compliance at Scale

Governments can automate compliance tasks and meet global mandates for email and electronic records management economically and agency-wide. Alfresco solutions also help agencies satisfy cloud-first directives and open source initiatives.

Meet Security and Compliance Standards:

Alfresco meets information, records management and open government compliance standards, mandates and directives worldwide—including NARA 2016 & 2019, ISO 15489, NOARK, MoReq 2010, Freedom of Information/Access to Information Acts, and VERS—and is the only open source platform certified to the DoD 5015.02 standard for records management.

Alfresco Customers:

Our customers span all levels of government from nations around the globe and include some of the largest and most high-profile agencies and departments.

Our platform and solutions power essential systems and programs, and securely process and manage some of the most important government content and records in existence.

U.S. Department of the Navy – Tasking, Records, and Consolidated Knowledge Enterprise Repository System (DON TRACKER)
U.S. General Services Administration – Data 2 Decisions (D2D)
U.K. Department for Business Innovation & Skills – Future Information Management Systems (FIMS)

Alfresco Platform Benefits

- **Scalable –** The Alfresco platform can easily scale to support large volumes of users and content. In a recent benchmark test, Alfresco One ingested 1,000 documents per second, quickly reaching 1 billion documents, backed by a 3.2 terabyte database in Amazon Aurora. Alfresco One, running on Amazon EC2, achieved this with linear ingestion scalability, an important success factor in large migration and consolidation projects.

- **Extensible –** The Alfresco platform easily integrates with existing hardware and software systems and eliminates lock-in to one vendor or one stack. Alfresco also has the functionality to migrate electronic content and both structured and unstructured data from existing systems—third-party Enterprise Content Management (ECM) & Customer Relationship Management (CRM)'s, Office 365, emails, file shares, social media, collaboration/file synching software, ERP, physical records, and WWW— and manage it as records in a single repository.

- **Open Source —** Built on open standards, the Alfresco platform enables governments to take advantage of cost savings, innovation, flexibility, freedom, security and accountability not attainable with propriety software solutions. We provide a low cost, open source subscription model with minimal upfront investment that can be driven out of operating expense (op ex) as opposed to capital expense (cap ex).

- **Cloud –** Alfresco offers customers the choice of where and when to store their content. Alfresco One is a complete hybrid cloud ECM platform that manages and synchronizes content across on-premises and cloud repositories.

- **Simple to Implement and Use —** Alfresco enables rapid deployment to deliver immediate business value and rapid application development using pre-built components and lightweight scripting.
