

FEBREZE WITH GAIN® ORIGINAL SCENT FRAGRANCE

At P&G, we know that fragrance is an important part of product experience for many people and we understand they also want to know about the fragrances we use.

The unique fragrances specially formulated for our products often have many ingredients which are similar to those found in many fruits, flowers and foods. Here we have provided insight into where else these ingredients may be found as well as their aromatic character which provides the scent experience. Fragrance ingredients are listed in alphabetical order down to 0.01% in the product. We have also included fragrance allergens to European Union standards.
