Retirement trajectories in Finland and the Netherlands, workers from their mid-fifties until retirement

The research is based on two population datasets for both countries. The first dataset for the Netherlands included 2,277 persons born between 1943 and 1945. The other included 12,843 people born between 1940 and 1946. The first population dataset for Finland included 56,000 persons born in 1948. The other dataset included 238,099 persons born between 1937 and 1948.

Doctoral defence at the University of Tampere on 21 September

Aart-Jan Riekhoff (M.Sc.) will defend his doctoral dissertation Retirement Trajectories in the Netherlands and Finland: Institutional Change, Inequalities, De-standardisation and Destabilisation at the University of Tampere on Friday, 21 September 2018 at 12 noon (University of Tampere, Linna Building Auditorium K103, Kalevantie 5, Tampere). Opponent: Prof. Joakim Palme, Uppsala University. The defence will be in English.

Riekhoff’s thesis is also published by the Finnish Centre for Pensions (Studies 05/2018)
