WHAT IS HEPATOCELLULAR CARCINOMA?

HEPATOCELLULAR CARCINOMA (HCC) is the most common type of liver cancer, accounting for about 75% of liver cancer cases in the U.S.1 According to 2019 annual estimates from the American Cancer Society, **42,000** new cases of liver cancer will be diagnosed and approximately **32,000** people will die from liver cancer.¹

HOW COMMON IS HCC?

FACTORS?

CHRONIC INFECTION WITH HEPATITIS B VIRUS AND/OR HEPATITIS C VIRUS

about 3 times more common in men

than in women.1

OBESITY

DIABETES

SMOKING

QUICK FACTS

The median age at diagnosis in the U.S. is years old.3

This type of liver cancer is the third leading cause of cancer-related deaths worldwide.2

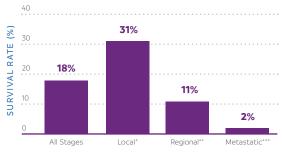

HCC related to hepatitis C infection has become the fastest-rising cause of cancer-related deaths in the U.S.4

Liver cancer is more common in countries in sub-Saharan Africa and Southeast Asia than in the U.S. In many of these countries, it is the most common type of cancer.5

WHAT IS THE OUTLOOK?

Five-year survival rates by stage at diagnosis:

- STAGE AT DIAGNOSIS
- The cancer has not spread beyond the liver.
- The cancer has spread directly to nearby lymph nodes, tissues or organs.
- *** The cancer has spread to distant parts of the body.

WHAT ARE THE TREATMENT **OPTIONS?**

Standard treatment options for patients with HCC include:

SURVEILLANCE

LIVER TRANSPLANT

EMBOLIZATION THERAPY*

ABLATION THERAPY

Ш

SURGERY

THERAPY *

Patients may also receive investigational treatments by participating in a clinical trial.

- *Destroys body tissue
- ** Use of substances to block or decrease the flow of blood
- *** Use of drugs or other substances to more precisely identify and attack cancer cells
