One of our biggest advancements in skincare in 200 years, Opte is not a laser, make-up or skin lightening cream. After 10 years of development and 13 patents, Opte combines the best of optics, proprietary algorithms, printing technology, and skincare in one device. Opte scans, detects, and corrects hyper-pigmentation with precision application to reveal the natural beauty of your skin every day.

**CONSUMER INSIGHTS***

- 97% want to look as good as they feel
- 94% want the natural radiance of their skin to shine
- 82% want to be seen as they see themselves

**PRECISION WAND**

SAFE LED LIGHTS
maximize the contrast in skin melanin (as it scans), allowing the camera to see significantly more pigmentation than the human eye, detecting visible spots, and the spots not yet noticeable.

INTEGRATED DIGITAL CAMERA
captures 200 skin images per second, resulting in 60,000 pictures of skin analyzed with each 5 minute use.

PRECISE COLOR ALGORITHM
micro-processes 70,000 lines of code to determine the size, shape and intensity of the spot in contrast to the adjacent surrounding skin.

MICRO PRINTER
contains 120 thermal ink-jet nozzles that deposit Optimizing Serum by the picoliter (one billionth of a liter) to achieve precise coverage with 97% less product on your skin than alternatives.

**PRECISION SKINCARE**

Optimizing Serum contains only the ingredients needed to achieve naturally beautiful looking skin while reducing the appearance of spots over time.

- Mineral pigments provide immediate coverage and create an even, natural look.
- Spot lightening skincare ingredients proven to reduce the appearance of age spots over time.
- Contains moisturizing ingredients that allow skin to retain moisture and stay hydrated.

**SCANS**
Skin to find
tonal variations

**DETECTS**
Age spots and other hyperpigmentation

**CORRECTS**
Tonal variations with Optimizing Serum
