

THE KENDALL CUSTOM

Car Details:

Building a custom car takes hard work—from countless design iterations, specifying just the right engine and adding final touches to the interior and trim, to the greased elbows resulting from months spent under the hood. To do the job, and get it done right, takes a unique type of person. When Kendall Motor Oil partnered with Thompson Street Customs to design and build The Kendall Custom, we knew there could be no better team to get the job done.
