

FEEDING THE FUTURE

Transforming Agriculture: Our 2030 Commitments

As the global population continues to grow, Nutrien is committed to our purpose: to grow our world from the ground up. Doing it sustainably means taking ambitious actions that will lead the next wave of agriculture's evolution.

By the year 2030, we are striving for positive impact across our company and industry.

OUR GLOBAL IMPACT

Feeding the Planet Sustainably

We are strengthening food security by scaling sustainable and productive agriculture.

Environment and Climate Action

We provide solutions and platforms to reduce emissions in alignment with climate science.

Inclusive Agriculture

We are supporting rural livelihoods and increased participation of underrepresented stakeholders in agriculture.

How we're doing it

ENABLE

growers to adopt sustainable and productive agricultural products and practices on **75 million acres** globally.

ACHIEVE

at least a **30 percent reduction in greenhouse gas (GHG)** emissions (Scope 1 + 2) per tonne of our products produced, from a baseline year of 2018.

LEVERAGE

our **farm-focused technology** partnerships and investments to drive positive impact in industry and grower innovation and inclusion.

LAUNCH AND SCALE

a comprehensive Carbon Program, empowering growers and our industry to **accelerate climate-smart agriculture** and **soil carbon sequestration** while rewarding growers for their efforts.

INVEST

in new technologies and pursue the transition to **low-carbon fertilizers**, including blue and green ammonia.

CREATE

new grower financial solutions to strengthen social, economic and environmental outcomes in agriculture.

These sustainability commitments are just the beginning. See how we're continuously raising expectations and join us on our journey.
