

The Rapid Infusion Technology (**RITE**)™ Platform represents an advancement beyond the state-of-the-art in orally disintegrating and buccal tablet technologies, enabling a range of active ingredients to work quickly and efficiently in the body.

How it works

The tablet is placed against the inner cheek on your lower jaw

Moisture triggers the tablet's unique lattice structure to disintegrate in under 3 seconds

Once disintegrated, the active pharmaceutical ingredient (API) is absorbed by the body and quickly available for therapeutic action
