

A New Approach to Preventing Drug Overdose Deaths

Overdose deaths exceeded 100,000 in the 12-month period ending April 2021, primarily due to illicit fentanyl.¹

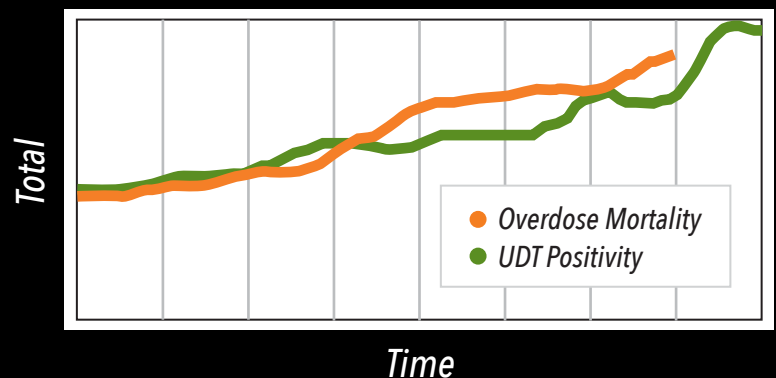

this is a
lethal dose
of fentanyl

Community responses are hampered by **significant delays** in public health surveillance data.

Our *JAMA Network Open* study shows a **strong correlation** between **urine drug test (UDT) results** and **drug overdose mortality**.²

Millennium Health is committed to **providing timely data** to address the overdose epidemic allowing for more **effective targeting of resources** to help reduce overdose deaths.
