Westmark Lower School

Westmark Lower School is a 25,000 SF ground-up build of a classroom facility. The Lower School includes 8 classrooms, outdoor play area, small theater space and a central courtyard.

The building structure is being contemplated as a CLT system and the project design incorporates rammed earth, IPE decking, and other raw materials for a natural feel to the area. This is the first of multiple phases for the school that focuses on a specialized approach for those students with learning differences.
