Firmware security in financial services supply chains

88% report their organization has been the victim of a firmware-level attack in the last two years. Understandably so...
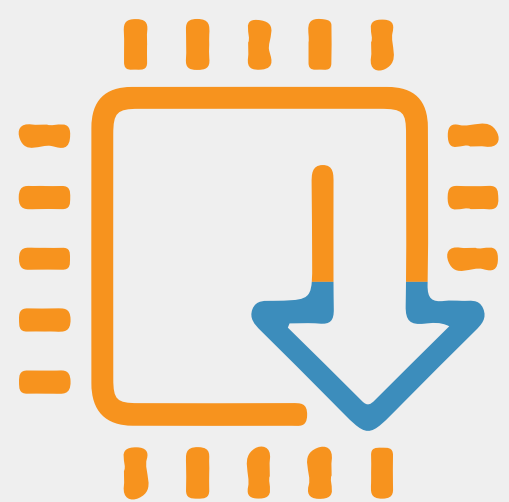

And perhaps most alarming of all

93% of IT security DMs are surprised by their lack of insight into current firmware threats...

92% believe that cyber criminals are better equipped to attack firmware than their organizations are at protecting it.

...despite the same proportion stating that firmware should be an urgent priority **93%**
