

## Orka® Platform on AWS

Orka Platform enables enterprise-grade MacDevOps in an AWS cloud environment by leveraging Kubernetes to create a scalable macOS orchestration and life cycle management solution.

## macOS virtual machines when you need them

Deploy (and redeploy) macOS virtual machines for software builds and testing in seconds, not minutes or hours.

“You’re able to spin up, spin down VMs using an easy-to-use CLI or API.”

-Homebrew

## Seamless automated CI/CD pipelines

Connect to the most popular DevOps tools to build macOS and iOS DevOps pipelines with the tools you already know and love.

“It was super easy to integrate Orka with Jenkins. With only a few lines of code, we could run jobs.”

-Glovo

## Enterprise-grade performance

Orka Platform was designed to be lightweight and built specifically for Mac. Its use of Kubernetes makes it highly scalable and able to support enterprise-level workflows.

“We need to build a new version of OpenSSL and then download over a thousand other packages, test them and build them with Orka Platform.”

-Homebrew

## Expertise at your fingertips

Access expert support and guidance from the MacStadium team of experts that has been designing Mac-centric solutions for over a decade.

“The MacStadium team stood by our side the entire time supporting us whenever we needed it.”

-Jamf
