

# What's in Open-source software?

Lineaje Data Labs analyzed tens of thousands of open-source projects, including the top projects from the Apache Software Foundation (ASF) and other projects, to gain statistically significant insights.

**10%**

Visible direct dependencies

**2.7x**

A package is reused in a project

**68%**

Non-Apache (or other) Open-source projects pulled in

**90%**

Transitive, invisible dependencies

**32%**

Self-written dependencies

## How Risky is Open-source software?

**3%**

Unknown components

**5.3%**

Components of dubious origin

Only **10%**

Vulnerabilities patchable by developers

**64.2%**

Vulnerabilities that don't have a fix yet

**25.8%**

With fixes but deep transitive dependencies so developers cannot patch the supply chain
