

Sukari, Egypt

## AngloGold Ashanti delivers nine-fold increase in 2024 free cash flow\* to \$942m versus prior year; Adjusted EBITDA\* +93% year-on-year and H2 dividend growth of 263% to 69 US cents per share; total cash costs\* +4% for FY 2024, below group inflation.

AngloGold Ashanti plc (“AngloGold Ashanti”, “AGA” or the “Company”) delivered significant year-on-year gains in earnings and free cash flow\* in 2024, following continued focus on cost control and the year’s strongest gold production period from its managed operations<sup>(2)(3)(4)</sup> in Q4 2024.

Higher revenues were reflected in significantly stronger cash flow and earnings in a year where costs rose by less than half the inflation rate for managed operations, and the Company focused on active management of working capital.

Free cash flow\* rose to \$942m in 2024, up from \$109m in 2023. Adjusted earnings before interest, tax, depreciation and amortisation (“Adjusted EBITDA\*”) rose 93% to \$2.747bn, from \$1.420bn in 2023.

*“The significant growth in free cash flow\* – to almost a billion dollars in 2024 – is a result of our focus on continued operational and efficiency improvements, which in turn have allowed us to capture the benefit of a healthy gold price,”* CEO Alberto Calderon said. *“With the business receiving appropriate investment and the balance sheet at its strongest position in well over a decade, we’re able to pass on those benefits to shareholders in a more generous dividend policy.”*

Headline earnings<sup>(5)</sup> of \$954m, or 221 US cents per share for 2024, compared to a headline loss<sup>(5)</sup> of \$46m, or 11 US cents per share for 2023. The average gold price received per ounce\* for the group rose 24% to \$2,394/oz in 2024 from \$1,930/oz in 2023.

### New Dividend Policy Improves Competitiveness

As a result of improved operational fundamentals, a robust balance sheet, and increased confidence in the Company’s outlook, the Company’s Board of Directors has approved a revised dividend policy aimed at delivering enhanced and sustainable shareholder returns. Under the new policy, AngloGold Ashanti will target a 50% payout of free cash flow, where free cash flow is defined as operating cash flow less capital expenditure of managed operations, subject to maintaining an adjusted net debt to adjusted EBITDA ratio of 1.0 times. Additionally, the revised policy introduces a base dividend of \$0.50 per share per annum, payable in quarterly increments of \$0.125 per share. This base dividend represents the minimum payout, ensuring a stable return to shareholders even through commodity price cycles. This enhanced policy reflects the Company’s commitment to strong capital discipline, financial resilience, and delivering long-term value to shareholders, while

providing greater predictability and downside protection in varying market conditions.

An interim dividend of \$347m, or 69 US cents per share, was declared for the second half. This takes the total payout for 2024 to \$439m, or 91 US cents per share.

The new policy is an important part of a balanced capital allocation framework. The leverage target – a maximum of one times Adjusted net debt\* to Adjusted EBITDA\*, through the cycle – remains unchanged, as does ensuring a well capitalised portfolio and the ability to fund growth projects.

### Lowest Leverage Since 2011

The balance sheet remained in a strong position after funding all capital expenditure, the prior dividend payment and the cash portion of the acquisition of Centamin plc (“Centamin”). At the end of 2024, Adjusted net debt\* was \$567m, and the Adjusted net debt\* to Adjusted EBITDA\* ratio was 0.21 times, the lowest since 2011. There was approximately \$2.6bn in liquidity, including cash and cash equivalents of \$1.4bn, at year end.

### Improved Fundamentals Support 2024 Performance

AngloGold Ashanti posted strong performances from several key operations during 2024, demonstrating improved operational resilience. The Australian mines recovered well from rains and flooding in the first half of the year, while Siguri finished the year well after Q1 2024 production was impacted by metallurgical recovery challenges.

The marked operational turnaround of the Brazilian operations also continued to gain momentum following resumption of concentrate processing at the Queiroz plant during Q3 2024. Obuasi delivered an improved Q4 2024 performance, in line with its revised mine plan, amid improved sub-level open stoping and the continued rollout of the underhand drift and fill method.

The Company’s Total Recordable Injury Frequency Rate (“TRIFR”) of 0.98 injuries per million hours worked in 2024 improved compared to 1.09 in 2023, and remains far better than the average 2023 performance of 2.59 injuries per million hours worked by the members of the International Council on Mining and Metals.

Group gold production<sup>(2)(3)(4)</sup>, including 40,000oz from Sukari, was 2.661Moz for 2024. Gold production<sup>(2)(3)(4)</sup> for the year was driven by year-on-year improvements at Cuabá (AGA Mineração) (+8%),

CONTINUED

Cerro Vanguardia (+7%), Siguirí (+5%), Sunrise Dam (+3%) and Tropicana (+1%), as well as the introduction of Sukari into the portfolio. These increases were partly offset by lower gold production contributions from Iduapriem (-12%), Kibali (-10%) and Serra Grande (-7%). At Obuasi, gold production for the year was 221,000oz, in line with recent guidance, at a total cash cost\* of \$1,214/oz. The Obuasi mine generated \$26m of free cash flow\* for 2024.

The solid gold production performance from AngloGold Ashanti's managed operations, alongside continued implementation of the Full Asset Potential programme and increased vigilance on expenditures at the site level, delivered a strong overall cost performance despite persistent inflation across several of its operating jurisdictions. The aggregate inflation rate for the group was about 6.6%, which represents consumer price index (CPI) changes in the jurisdictions in which the Company operates. This increase in inflation was partially mitigated by favourable exchange rate fluctuations.

Total cash costs per ounce\* for the group<sup>(1)(2)(3)</sup> rose 4% year-on-year to \$1,157/oz in 2024 versus \$1,115/oz in 2023. Total cash costs per ounce\* for managed operations<sup>(1)(2)(3)</sup> rose by only 2% year-on-year to \$1,187/oz in 2024 versus \$1,162/oz in 2023, despite inflationary pressures on labour, material and contractor costs, and the impact of higher royalties paid, driven by the increase in the average gold price received per ounce\*. All-in sustaining costs per ounce\* ("AISC") for the group<sup>(1)(2)(3)</sup> rose 4% year-on-year to \$1,611/oz in 2024 versus \$1,544/oz in 2023 mainly due to increased total cash costs per ounce\* and higher sustaining capital expenditure\*.

### Continued Exploration Success

The Company has achieved significant exploration success over the past five years, adding 20.9Moz to its gold Mineral Reserve before accounting for depletion and including the acquisition of Centamin. This marks the seventh consecutive year that AngloGold Ashanti has recorded annual increases in gold Mineral Reserve before depletion. Following the acquisition of Centamin, total group Mineral Reserve at the end of 2024, was 31.2Moz, total group gold Measured and Indicated Mineral Resource was 67.1Moz and total group gold Inferred Mineral Resource was 55.0Moz.

### Strong Operational Performance Recorded in Q4 2024

Gold production for the group<sup>(1)(2)(3)(4)</sup>, including 40,000oz from the newly acquired Sukari mine, was 750,000oz for Q4 2024 versus 738,000oz in Q4 2023, mainly due to the addition of Sukari and higher production from Siguirí, Cerro Vanguardia, Sunrise Dam, Tropicana and Cuiabá (AGA Mineração). This was partly offset by lower gold production year-on-year at the Kibali joint venture, where lower grades resulted in gold production of 80,000oz in Q4 2024 compared with 93,000oz in Q4 2023. At Obuasi, Q4 2024 gold production increased 13% quarter-on-quarter as the mine ramped up the underhand drift-and-fill mine plan, which targets the higher-grade areas where challenging ground conditions prevail.

Total cash costs per ounce\* for the group<sup>(1)(2)(3)</sup> increased 9% year-on-year to \$1,144/oz in Q4 2024 from \$1,050/oz in Q4 2023.

AISC per ounce\* for the group<sup>(1)(2)(3)</sup> rose by 3% year-on-year in Q4 2024 to \$1,647/oz compared with \$1,598/oz in Q4 2023.

Headline earnings<sup>(5)</sup> of \$405m, or 89 US cents per share, in Q4 2024, compared to headline earnings<sup>(5)</sup> of \$87m, or 21 US cents per share, in Q4 2023. Adjusted EBITDA\* increased to \$884m in Q4 2024 from \$574m in Q4 2023. Free cash flow\* rose to \$389m during Q4 2024, from \$293m in Q4 2023.

### Sukari Acquisition Bolsters Portfolio

On 22 November 2024, the acquisition of Centamin was successfully completed. Integration of the Sukari gold mine, and Eastern Desert Exploration commenced immediately. Sukari contributed 40,000oz of gold production at a total cash cost\* of \$1,165/oz in 2024. The mine contributed \$61m in free cash flow\* to group free cash flow\* in 2024.

*"The addition of Sukari, a true tier-one operation, provides a step-change in our production profile, while improving the cost outlook and enhancing cash flow generation", CEO Alberto Calderon said.*

### Outlook<sup>(6)</sup>

The Company is pleased to provide updated 2025 guidance, following the successful integration of Sukari into the portfolio. Gold production for the group<sup>(2)(3)(4)</sup> is forecast to range between 2,900Moz and 3,225Moz. Total cash cost\* for the group<sup>(2)(3)</sup> is forecast to range between \$1,125/oz and \$1,225/oz and AISC\* for the group<sup>(2)(3)</sup> is forecast to range between \$1,580/oz and \$1,705/oz. Total capital expenditure for the group<sup>(2)(3)</sup> is expected to be between \$1,620m and \$1,770m.

<sup>(1)</sup> All financial periods within the financial year ended 31 December 2023 have been adjusted to exclude the *Córrego do Sítio* ("CdS") operation that was placed on care and maintenance in August 2023.

<sup>(2)</sup> The term "managed operations" refers to subsidiaries managed by AngloGold Ashanti and included in its consolidated reporting, while the term "non-managed joint ventures" (i.e., Kibali) refers to equity-accounted joint ventures that are reported based on AngloGold Ashanti's share of attributable earnings and are not managed by AngloGold Ashanti. Managed operations are reported on a consolidated basis. Non-managed joint ventures are reported on an attributable basis.

<sup>(3)</sup> On 22 November 2024, the acquisition of Centamin was successfully completed. Centamin was included in the financial year ended 31 December 2024 from the effective date of acquisition.

<sup>(4)</sup> Includes gold concentrate from the Cuiabá mine sold to third parties.

<sup>(5)</sup> The financial measures "headline earnings (loss)" and "headline earnings (loss) per share" are not calculated in accordance with IFRS<sup>®</sup> Accounting Standards, but in accordance with the Headline Earnings Circular 1/2023, issued by the South African Institute of Chartered Accountants (SAICA), at the request of the Johannesburg Stock Exchange Limited (JSE). These measures are required to be disclosed by the JSE Listings Requirements and therefore do not constitute Non-GAAP financial measures for purposes of the rules and regulations of the US Securities and Exchange Commission ("SEC") applicable to the use and disclosure of Non-GAAP financial measures.

### CENTAMIN ACQUISITION

Centamin acquisition was completed on 22 November 2024 including flagship Sukari Mine in Egypt, which brought another Tier 1 gold mine into our portfolio as well as prospective exploration properties in Egypt's Eastern Desert and projects in Côte d'Ivoire. The acquisition improved cash flow and long-term value of the business as it increased gold production and decreased our cost profile, further diversifying the portfolio,

### OBUASI NEW UHDF MINING METHOD

The Underhand Drift and Fill mining method ("UHDF") has been safely and successfully trialed. UHDF will be scaled up to form part of a hybrid mining approach alongside sub-level open stoping, to underpin a progressive increase in anticipated gold production to a rate of approximately 400,000oz per annum by 2028.

### FULL ASSET POTENTIAL PROGRAMME

Improve portfolio quality

Drives strong cost performance, offsetting inflationary impacts which delivers significant efficiencies, greater predictability and much improved resilience to withstand gold production disruptions.

Since the implementation of the programme, total cash costs in real terms have declined 5% over Q1 2021 to Q4 2024. Furthermore, this has resulted in \$621m in incremental Adjusted EBITDA since 2022.

London, Denver, Johannesburg, 19 February 2025 - AngloGold Ashanti plc ("AngloGold Ashanti", "AGA" or the "Company") is pleased to provide its financial and operational update for the three months and year ended 31 December 2024.

## GOLD PRODUCTION

Gold production for the group in 2024 was 2,661,000oz, compared to 2,644,000oz in 2023.

Gold production for the group increased by 1% year-on-year, with improvements recorded at Cuiabá (AGA Mineração) (+8%), Cerro Vanguardia (+7%), Sigüiri (+5%), Sunrise Dam (+3%) and Tropicana (+1%), as well as the introduction of Sukari into the portfolio. These increases were partly offset by lower gold production contributions from Iduapriem (-12%) and Kibali (-10%) both impacted by excessive rainfall, as well as Serra Grande (-7%) and Obuasi (-1%), whilst gold production at Geita remained steady relative to the prior year. The Company realised overall year-on-year uplifts in milled tonnes and underground recovered-grade, on the back of continued reinvestment in improvement initiatives.

Cuiabá (AGA Mineração) had a strong fourth quarter and year, continuing its performance turnaround with consistent gold production helped by the resumption of processing and refining of gold concentrate at the Queiroz metallurgical plant in September, contributing to a 16% reduction year-on-year in total cash costs per ounce\*. The Australian assets overcame challenges from flooding, which occurred towards the end of Q1 2024, finishing the year strongly by delivering a 5% improvement in gold production compared to Q4 2023.

## COSTS

Total cash costs per ounce\* for the group increased by 9% year-on-year to \$1,144/oz in Q4 2024, from \$1,050/oz in Q4 2023. Total cash costs per ounce\* for managed operations increased 7% year-on-year from \$1,092/oz in Q4 2023 to \$1,165/oz in Q4 2024 mainly due to higher input costs. Total cash costs per ounce\* for non-managed joint ventures increased by 27% year-on-year from \$761/oz in Q4 2023 to \$967/oz in Q4 2024, reflecting Kibali's weaker performance.

Total cash costs per ounce\* for the group increased by 4% year-on-year to \$1,157/oz in 2024 from \$1,115/oz in 2023. Total cash costs per ounce\* for managed operations increased 2% year-on-year from \$1,162/oz in 2023 to \$1,187/oz in 2024. Total cash costs per ounce\* for non-managed joint ventures increased by 17% year-on-year from \$802/oz in 2023 to \$935/oz in 2024. The overall cost performance came amid an about 6.6% inflation rate increase, which represents CPI changes in the jurisdictions in which the Company operates, and about 2% higher costs related to royalties based on the average gold price received per ounce\* during 2024, partly offset by an about 4% weaker cumulative foreign currency exchange rate against the US dollar.

AISC per ounce\* for the group rose 3% year-on-year to \$1,647/oz in Q4 2024, from \$1,598/oz in Q4 2023. AISC per ounce\* for managed operations remained steady year-on-year at \$1,701/oz in Q4 2023 versus \$1,702/oz in Q4 2024. AISC per ounce\* for non-managed joint ventures increased by 31% year-on-year from \$907/oz in Q4 2023 to \$1,188/oz in Q4 2024.

AISC per ounce\* for the group rose by 4% year-on-year to \$1,611/oz in 2024, from \$1,544/oz in 2023. AISC per ounce\* for managed operations increased by 2% year-on-year to \$1,672/oz, compared to \$1,634/oz in 2023, mainly due to an increase in total cash costs per ounce\*, sustaining capital expenditure\*, and rehabilitation costs. AISC per ounce\* for non-managed joint ventures increased by 21% year-on-year from \$951/oz in 2023 to \$1,146/oz in 2024, reflecting Kibali's weaker performance.

## ADJUSTED EBITDA\*

Adjusted earnings before interest, tax, depreciation and amortisation\* ("Adjusted EBITDA\*") for Q4 2024 was \$884m, compared with \$574m for Q4 2023. Adjusted EBITDA\* was higher year-on-year mainly due to a higher average gold price received per ounce\*, higher gold ounces sold, lower costs associated with old tailing storage facilities ("TSFs") and governmental fiscal claims and higher equity earnings from associates and non-managed joint ventures. This increase was partly offset by higher operating costs, higher indirect taxes, legal fees mainly related to the Centamin acquisition, realised losses on non-hedge derivative contracts, and lower insurance claim credits than the prior year period.

Adjusted EBITDA\* for 2024 was \$2,747m, compared with \$1,420m in 2023. Adjusted EBITDA\* was higher year-on-year mainly due to a higher average gold price received per ounce\*, higher gold ounces sold, lower costs associated with old TSF and governmental fiscal claims, higher equity earnings from associates and non-managed joint ventures, and corporate restructuring costs in the prior period which did not recur in the current period. This increase was partly offset by higher operating and rehabilitation costs in the current period, unfavourable inventory movements, higher corporate costs, legal fees mainly related to the Centamin acquisition, and realised losses on non-hedge derivative contracts.

## EARNINGS

Basic earnings (profit attributable to equity shareholders) for Q4 2024 were \$470m, or 103 US cents per share, compared to

\$28m, or 7 US cents per share in Q4 2023. Basic earnings were higher year-on-year mainly due to a higher average gold price received per ounce\*, impairment reversals in the current period versus impairments in Q4, 2023, lower losses on derecognition of assets, favourable foreign exchange and fair value adjustments and lower care and maintenance costs. This increase was partly offset by higher operating and royalty costs, lower insurance credits than the prior period, legal fees mainly associated with the Centamin acquisition, higher other indirect taxes, lower equity earnings from associates and non-managed joint ventures and higher taxation.

Basic earnings (profit attributable to equity shareholders) for 2024 were \$1,004m, or 233 US cents per share, compared to a loss of \$235m, or 56 US cents per share in 2023. Basic earnings were higher year-on-year mainly due to a higher average gold price received per ounce\*, impairment reversals in the current period versus impairments in 2023, lower losses on derecognition of assets, favourable foreign exchange and fair value adjustments, lower costs associated with old TSF and governmental fiscal claims, and corporate restructuring costs in the prior period which did not recur in the current period. This increase was partly offset by higher operating and rehabilitation costs in the current period, unfavourable inventory movements, higher corporate costs, legal fees mainly related to the Centamin acquisition, higher care and maintenance costs, lower equity earnings from associates and non-managed joint ventures and higher taxation.

Headline earnings<sup>‡</sup> for Q4 2024 were \$405m, or 89 US cents per share, compared with \$87m, or 21 US cents per share, in Q4 2023. Headline earnings were higher year-on-year mainly due to the same reasons which contributed to the increase in basic earnings in Q4 2024, in addition there were impairment reversals in the current period versus impairments in the prior period, and lower losses on derecognition of assets and taxes thereon.

Headline earnings<sup>‡</sup> for 2024 were \$954m, or 221 US cents per share, compared with a loss of \$46m, or 11 US cents per share, in 2023. Headline earnings were higher year-on-year mainly due to the same reasons which contributed to the increase in basic earnings in 2024, in addition there were impairment reversals in the current period versus impairments in the prior period, and lower losses on derecognition of assets and taxes thereon.

<sup>‡</sup> The financial measures "headline earnings (loss)" and "headline earnings (loss) per share" are not calculated in accordance with IFRS<sup>®</sup> Accounting Standards, but in accordance with the Headline Earnings Circular 1/2023, issued by the South African Institute of Chartered Accountants (SAICA), at the request of the

Johannesburg Stock Exchange Limited (JSE). These measures are required to be disclosed by the JSE Listings Requirements and therefore do not constitute Non-GAAP financial measures for purposes of the rules and regulations of the SEC applicable to the use and disclosure of Non-GAAP financial measures.

## CASH FLOW

Net cash inflow from operating activities was \$690m in Q4 2024, compared to \$404m in Q4 2023. This 71% increase was mainly due to the higher average gold price received per ounce\* and lower corporate restructuring costs, partly offset by lower dividends received from joint ventures and higher net taxes paid. After accounting for capital expenditure and loan repayments from Kibali, the Company recorded free cash inflow\* of \$389m during Q4 2024, compared to a free cash inflow\* of \$293m in Q4 2023.

Net cash inflow from operating activities was \$1,968m in 2024, compared to \$971m in 2023. This 103% increase was mainly due to the higher average gold price received per ounce\* and lower corporate restructuring costs, partly offset by lower dividends received from joint ventures and higher net taxes paid. After accounting for capital expenditure and loan repayments from Kibali, the Company recorded free cash inflow\* of \$942m during 2024, compared to a free cash inflow\* of \$109m in 2023.

Free cash flow\* before non-sustaining capital expenditure\* (attributable to ordinary shareholders), the metric on which the dividend payment was previously based, was an inflow of \$408m in Q4 2024, compared to an inflow of \$340m in Q4 2023. The Company's Board of Directors has reviewed the capital allocation policy and approved an amendment to the calculation of the gross dividend. Under the new policy, AngloGold Ashanti will target a 50% payout of free cash flow\*, where free cash flow\* is defined as operating cash flow less capital expenditure of managed operations, subject to maintaining an Adjusted net debt\* to Adjusted EBITDA\* ratio of 1.0 times. Additionally, the revised policy introduces a base dividend of \$0.50 per share per annum, payable in quarterly increments of \$0.125 per share. The proposed interim dividend, based on the revised dividend policy, for the six months ended 31 December 2024, is 69 US cents per share.

AngloGold Ashanti received dividends of \$44m and loan repayments of \$10m from the Kibali joint venture during Q4 2024, compared to dividends received of \$94m during Q4 2023. At 31 December 2024, the Company's attributable share of the

QUARTERLY AND ANNUAL REVIEW CONTINUED

outstanding cash balances from the Democratic Republic of the Congo (“DRC”) was \$39m, compared to nil at 30 September 2024. Free cash flow\* was impacted by movements in the lock-up of value added tax (“VAT”) at Geita and Kibali and foreign exchange controls and export duties at Cerro Vanguardia (“CVSA”):

- In Tanzania, net overdue recoverable VAT input credit refunds (after discounting provisions) increased by \$25m during Q4 2024 to \$163m from \$138m at 30 September 2024, as a result of foreign exchange adjustments of \$25m, new claims submitted of \$23m and discounting adjustments of \$3m, partially offset by processing verified VAT claims against corporate tax payments of \$26m. AngloGold Ashanti expects to continue offsetting verified VAT claims against corporate taxes.
- In the DRC, the Company's attributable share of the net recoverable VAT balance (including recoverable fuel duties and after discounting provisions) decreased by \$11m during Q4 2024 to \$65m from \$76m at 30 September 2024, as a result of claim refunds of \$11m and an unwinding of discount and revaluation adjustments decrease of \$6m, partially offset by new claims submitted of \$6m.
- In Argentina, the net export duty receivables (after discounting provisions) remained steady at \$3m# during Q4 2024 relative to Q3 2024. In addition, CVSA's cash balance decreased by \$36m# during Q4 2024 to \$134m# from \$170m# at 30 September 2024. The cash remains available for CVSA's operational and exploration requirements.
- During Q4 2024, CVSA paid the remaining offshore dividends of \$50m# to AngloGold Ashanti by entering into a currency swap to obtain the necessary US dollars.

# US dollar equivalent and at prevailing exchange rates.

**GOLD HEDGES**

During Q4 2023, AngloGold Ashanti entered into zero-cost collars for a total of approximately 300,000oz of gold for the period from January 2024 to December 2024 in order to manage gold price downside risk of the high costs associated with the Brazilian operations. During Q4 2024, the price of gold remained elevated above the cap of these gold derivatives. The call options on the hedge structure were exercised by the banks resulting in a realised loss position of approximately \$38.5m during Q4 2024. The average price of gold for Q4 2024 was calculated as \$2,661/oz which was greater than the call strike of \$2,148/oz on those gold derivatives. AngloGold Ashanti recorded a total realised loss of \$86m in respect of these gold derivatives in 2024.

All gold hedges expired at 31 December 2024 and there are no hedges in place for 2025. As a result, the Company is fully unhedged with respect to its gold production as of 1 January 2025.

Tropicana, Australia

Rounding of figures may result in computational discrepancies.

## BALANCE SHEET AND LIQUIDITY

Adjusted net debt\* decreased to \$567m at 31 December 2024 from \$1,268m at 31 December 2023. The ratio of Adjusted net debt\* to Adjusted EBITDA\* was 0.21 times at 31 December 2024 compared to 0.89 times at 31 December 2023. The Company remains committed to maintaining a flexible balance sheet with an Adjusted net debt\* to Adjusted EBITDA\* target ratio of 1.0 times through the cycle. At 31 December 2024, the balance sheet remained strong, with liquidity comprising the US\$1.4bn 2022 multi-currency RCF of which \$1.22bn was undrawn, and the South African R150m (\$8m) RMB corporate overnight facility which was undrawn. The 2021 Geita multi-currency RCF matured on 13 December 2024. At 31 December 2024, the \$65m 2022 Siguiiri RCF was fully drawn. At 31 December 2024, the Company had a cash and cash equivalent balance (net of bank overdraft) of approximately \$1.397bn, taking overall group liquidity to approximately \$2.6bn.

## CAPITAL EXPENDITURE

For Q4 2024, sustaining capital expenditure\* of the group decreased by 7% year-on-year to \$285m, from \$308m in Q4 2023. Sustaining capital expenditure\* of managed operations for Q4 2024 was \$266m, a year-on-year decrease of 10% compared to \$295m in Q4 2023. The decrease was mainly due to once-off costs incurred in Q4 2023, including the carbon-in-leach ("CIL") Tank 1 failure recovery project at Siguiiri. Sustaining capital expenditure\* of non-managed joint ventures increased by 46%

year-on-year to \$19m in Q4 2024, from \$13m in Q4 2023, mainly due to higher expenditure on heavy mobile equipment ("HME") rebuilds and IT projects.

Non-sustaining capital expenditure\* of the group was 71% higher year-on-year at \$84m in Q4 2024, compared to \$49m in Q4 2023. Non-sustaining capital expenditure\* of managed operations increased by 72% year-on-year to \$67m in Q4 2024, from \$39m in Q4 2023 mainly due to higher Beposo TSF spend at Iduapriem, the Havana growth project at Tropicana and at Siguiiri due to infrastructure capital expenditure in preparation for Block 3 execution. Non-sustaining capital expenditure\* of non-managed joint ventures increased by 70% year-on-year to \$17m in Q4 2024, from \$10m in Q4 2023, mainly due to the solar energy project at Kibali.

Capital expenditure of the group (including equity-accounted non-managed joint ventures) was 8% higher year-on-year at \$1,215m, compared to \$1,127m in 2023. Capital expenditure of managed operations increased by 5% year-on-year to \$1,090m in 2024, compared to \$1,042m in 2023. This increase was mainly driven by a \$26m increase in non-sustaining capital expenditure\*, primarily due to higher Beposo TSF spend at Iduapriem, and a \$22m increase in sustaining capital expenditure\*, mainly due to acquisition of additional mining fleet at Siguiiri and Mineral Reserve development at Sunrise Dam. Capital expenditure of non-managed joint ventures increased by 47% year-on-year to \$125m in 2024, from \$85m in 2023, mainly as a result of the Kibali solar energy project and cyanide TSF.

**GUIDANCE CONTINUED**

<sup>(1)</sup> The Company is not providing quantitative reconciliations to the most directly comparable IFRS measures for its Non-GAAP financial guidance shown above in reliance on the exception provided by Rule 100(a)(2) of Regulation G because the reconciliations cannot be performed without unreasonable efforts as such IFRS measures cannot be reliably estimated due to their dependence on future uncertainties and adjusting items, including, among other factors, changes in economic, social, political and market conditions, including related to inflation or international conflicts, the success of business and operating initiatives, changes in the regulatory environment and other government actions, including environmental approvals, fluctuations in gold prices and exchange rates, the outcome of pending or future litigation proceedings, any supply chain disruptions, any public health crises, pandemics or epidemics (including the COVID-19 pandemic), and other business and operational risks and challenges and other factors, including mining accidents, that the Company cannot reasonably predict at this time but which may be material. Outlook economic assumptions for 2025 guidance are as follows: \$0.65/A\$, BRL5.88/\$, AP1,099/\$, ZAR18.00/\$ and Brent \$75/bbl.

Cost and capital forecast ranges for 2025 are expressed in "nominal" terms. "Nominal" cash flows are current price term cash flows that have been inflated into future value, using an appropriate "inflation" rate. Estimates assume neither operational or labour interruptions or power disruptions, nor further changes to asset portfolio and/or operating mines and have not been reviewed by AngloGold Ashanti's external auditors. Other unknown or unpredictable factors, or factors outside the Company's control, including inflationary pressures on its cost base, could also have material adverse effects on AngloGold Ashanti's future results and no assurance can be given that any expectations expressed by AngloGold Ashanti will prove to have been correct. Measures taken at AngloGold Ashanti's operations together with AngloGold Ashanti's business continuity plans aim to enable its operations to deliver in line with its production targets. Actual results could differ from guidance and any deviations may be significant. Please refer to the Risk Factors section in AngloGold Ashanti's annual report on Form 20-F for the financial year ended 31 December 2023 filed with the SEC.

Gold production is expected to range from 2.900Moz to 3.225Moz. Total cash costs per ounce\* for managed operations are expected to range from \$1,130/oz to \$1,230/oz in 2025. Total cash costs per ounce\* are forecast to remain within the guidance range due to the continued realisation of benefits from the Company's Full Asset Potential review programme and the integration of Sukari. Sustaining capital expenditure\* for 2025 is expected to grow from 2024 because of modest increases in stay-in-business capital and the full year of Sukari. The Company's managed operations are expected to operate at an AISC per ounce\* ranging from \$1,600/oz to \$1,725/oz in 2025. Non-sustaining capital expenditure\* for 2025 is expected to increase from 2024 due to additional investment in North Bullfrog and mining development at Siguiiri and Tropicana and the inclusion of Sukari for the full year. The Company continues to enforce capital and cost discipline across the business while prioritising the safety, health, and well-being of its employees and its host communities.

**2026 GUIDANCE**

		2026 Guidance <sup>(1)</sup>
Gold production	Gold production (koz) - Group	2,900 - 3,225
Costs <sup>(1)</sup>	All-in sustaining costs per ounce* (\$/oz) - Group	1,580 - 1,705
	Total cash costs per ounce* (\$/oz) - Group	1,125 - 1,225
Capital expenditure <sup>(1)</sup>	Capital expenditure (\$m) - Group	1,710 - 1,860
	Sustaining capital expenditure* (\$m) - Group	1,085 - 1,185
	Non-sustaining capital expenditure* (\$m) - Group	625 - 675

<sup>(1)</sup> The Company is not providing quantitative reconciliations to the most directly comparable IFRS measures for its Non-GAAP financial guidance shown above in reliance on the exception provided by Rule 100(a)(2) of Regulation G because the reconciliations cannot be performed without unreasonable efforts as such IFRS measures cannot be reliably estimated due to their dependence on future uncertainties and adjusting items, including, among other factors, changes in economic, social, political and market conditions, including related to inflation or international conflicts, the success of business and operating initiatives, changes in the regulatory environment and other government actions, including environmental approvals, fluctuations in gold prices and exchange rates, the outcome of pending or future litigation proceedings, any supply chain disruptions, any public health crises, pandemics or epidemics (including the COVID-19 pandemic), and other business and operational risks and challenges and other factors, including mining accidents, that the Company cannot reasonably predict at this time but which may be material. Outlook economic assumptions for 2026 guidance are as follows: \$0.67/A\$, BRL5.96/\$, AP1,2540/\$, ZAR18.00/\$ and Brent \$70/bbl.

Cost and capital forecast ranges for 2026 are expressed in "real" terms. "Real" cash flows are adjusted for "inflation" in order to reflect the change in value of money over time. Estimates assume neither operational or labour interruptions or power disruptions, nor further changes to asset portfolio and/or operating mines and have not been reviewed by AngloGold Ashanti's external auditors. Other unknown or unpredictable factors, or factors outside the Company's control, including inflationary pressures on its cost base, could also have material adverse effects on AngloGold Ashanti's future results and no assurance can be given that any expectations expressed by AngloGold Ashanti will prove to have been correct. Measures taken at AngloGold Ashanti's operations together with AngloGold Ashanti's business continuity plans aim to enable its operations to deliver in line with its production targets. Actual results could differ from guidance and any deviations may be significant. Please refer to the Risk Factors section in AngloGold Ashanti's annual report on Form 20-F for the financial year ended 31 December 2023 filed with the SEC.

2026 guidance reflects similar output to that in 2025 with anticipated growth at Obuasi. Continued progression of our Full Asset Potential programme and overall cost discipline underpins the guided flat cost metrics in real terms. The expected increase in non-sustaining capital expenditure reflects the anticipated incremental investment in the construction of North Bullfrog.

\* Refer to "Non-GAAP disclosure" for definitions and reconciliations.

REGIONAL REVIEW

AFRICA REGION

In the Africa region, managed operations (including Sukari) produced 360,000oz at a total cash cost\* of \$1,225/oz in Q4 2024, compared to 348,000oz at a total cash cost\* of \$1,076/oz in Q4 2023. In the Africa region, non-managed joint ventures produced (on an attributable basis) 80,000oz at a total cash cost\* of \$967/oz in Q4 2024, compared to 93,000oz at a total cash cost\* of \$761/oz in Q4 2023.

Managed operations (including Sukari) produced 1,254,000oz at a total cash cost\* of \$1,212/oz in 2024, compared to 1,237,000oz at a total cash cost\* of \$1,138/oz in 2023. In the Africa region, non-managed joint ventures produced (on an attributable basis) 309,000oz at a total cash cost\* of \$935/oz in 2024, compared to 343,000oz at a total cash cost\* of \$802/oz in 2023.

In Ghana, at Iduapriem, gold production was 50,000oz at a total cash cost\* of \$1,478/oz for Q4 2024, compared to 79,000oz at a total cash cost\* of \$962/oz during Q4 2023. Gold production decreased by 37% year-on-year in Q4 2024 compared to Q4 2023, primarily due to lower ore tonnes mined and temporary production challenges, including equipment and de-watering issues. While these factors impacted recovered grades, mitigation efforts included processing stockpile materials to sustain operations and maintain production continuity. Total cash costs per ounce\* increased by 54% year-on-year in Q4 2024 compared to Q4 2023, primarily due to lower gold production and

higher operating costs. This was driven by increased explosive usage and higher stockpile movement due to reduced ore mined.

Iduapriem’s gold production was 237,000oz at a total cash cost\* of \$1,118/oz in 2024, compared to 268,000oz at a total cash cost\* of \$943/oz in 2023. Gold production decreased by 12% year-on-year in 2024 compared to 2023, primarily due to adverse weather conditions, a 23% reduction in ore tonnes mined driven by operational challenges and lower equipment productivity. The decline in recovered grades (1.36g/t in 2024 vs. 1.54g/t in 2023), mainly from Block 7&8 Cut 2b and Block 5, further negatively impacted output. Gold production was also adversely affected by the processing of increased volumes of lower-grade stockpile material. Total cash cost per ounce\* increased by 19% year-on-year in 2024 compared to 2023, mainly reflecting the lower gold production and higher operating costs. Key factors included increased mining contractor costs, higher inventory movements due to reduced ore delivery, and elevated royalties on higher gold prices. This increase was partially offset by cost savings in fuel, power, service, and refinery expenses, as well as the earlier-than-expected completion of certain consultancy activities, and lower labour costs.

At Obuasi, gold production was 60,000oz at a total cash cost\* of \$1,169/oz for Q4 2024, compared to 61,000oz at a total cash cost\* of \$1,040/oz during Q4 2023. Gold production marginally decreased by 2% year-on-year in Q4 2024 compared to Q4 2023, mainly due to a 16% decline in treated tonnes, partially offset by a 14% grade improvement and higher process recovery. Underground contributions increased, while surface contributions declined. Total cash costs per ounce\* increased by 12% year-on-year in Q4 2024 compared to Q4 2023, mainly due to higher operating costs, including increased labour costs, higher support costs, higher contractor spend due to increased tonnes mined, and higher reagent consumption, partially offset by increased capital credits related to Mineral Reserve development.

Obuasi’s gold production was 221,000oz at a total cash cost\* of \$1,214/oz in 2024, compared to 224,000oz at a total cash cost\* of \$1,114/oz in 2023. Gold production marginally decreased by 1% year-on-year in 2024 compared to 2023, primarily due to a 3% decline in treated grade (6.25g/t in 2024 vs. 6.44g/t in 2023), development delays, supply challenges with slag-based binder for paste fill, poor ground conditions, and stope sterilisation in Block 10. Treated ore tonnes increased slightly, while mill recovery remained consistent at 86%. Total cash cost per ounce\* rose by 9% year-on-year in 2024 compared to 2023, mainly due to higher labour, material, and contractor costs, driven by a 9% increase in tonnes mined and a 1% rise in tonnes treated. Elevated reagent,

## QUARTER AND YEAR IN REVIEW CONTINUED

cement and power costs, and increased underground development expenses were partially offset by lower consumption of other materials and stores.

**In Guinea, at Siguiri,** gold production was 74,000oz at a total cash cost\* of \$1,747/oz for Q4 2024, compared to 66,000oz at a total cash cost\* of \$1,693/oz in Q4 2023. Gold production increased by 12% year-on-year in Q4 2024 compared to Q4 2023, mainly due to improved recovered grades, driven by the exclusion of Bidini carbonaceous material from the plant feed. Total cash costs per ounce\* rose by 3% year-on-year in Q4 2024 compared to Q4 2023, mainly driven by higher operating costs and royalties, partially offset by the increase in gold production.

Siguiri's gold production was 273,000oz at a total cash cost\* of \$1,703/oz in 2024, compared to 260,000oz at a total cash cost\* of \$1,650/oz in 2023. Gold production increased by 5% year-on-year in 2024 compared to 2023, mainly due to improved metallurgical recovery following the removal of Bidini carbonaceous material from the plant feed. This increase was partially offset by a reduction in head grade due to changes in the mining sequence. Total cash cost per ounce\* increased by 3% year-on-year in 2024 compared to 2023, mainly driven by higher mining and rehandle costs resulting from a 35% increase in tonnes mined and 1% more tonnes treated.

**In Tanzania, at Geita,** gold production was 136,000oz at a total cash cost\* of \$892/oz for Q4 2024, compared to 142,000oz at a total cash cost\* of \$868/oz in Q4 2023. Gold production decreased by 4% year-on-year in Q4 2024 compared to Q4 2023, mainly due to a 1% decline in head grade, reduced plant recovery, and 7% fewer tonnes treated, impacted by lower throughput rates from crusher circuit reliability issues and unplanned breakdowns. Total cash cost per ounce\* increased by 3% year-on-year in Q4 2024 compared to Q4 2023, mainly driven by higher operating costs, royalties, and production taxes, partially offset by increased metal inventory credits from higher ore stockpiles from mining at Nyamulilima Cut 2.

Geita's gold production was 483,000oz at a total cash cost\* of \$984/oz in 2024, compared to 485,000oz at a total cash cost\* of \$984/oz in 2023. Gold production remained stable year-on-year in 2024 compared to 2023, with a slight decrease attributed to minor mining and processing activity variances. Total cash cost per ounce\* remained unchanged year-on-year in 2024 compared to 2023, though individual cost components varied. Direct operating costs decreased mainly due to labour, reagents, stores, and fuel savings. Higher inventory credits were driven by increased ore stockpiling from Nyamulilima Cut 2. These savings

were offset by higher royalties and production taxes due to increased gold prices.

**In Egypt, at Sukari,** gold production was 40,000oz at a total cash cost\* of \$1,165/oz since its acquisition by the Company on 22 November 2024.

**In the DRC, at Kibali,** gold production (on an attributable basis) was 80,000oz at a total cash cost\* of \$967/oz for Q4 2024, compared to 93,000oz at a total cash cost\* of \$761/oz in Q4 2023. Gold production decreased by 14% year-on-year in Q4 2024 compared to Q4 2023 mainly due to adverse weather conditions, lower recovered grades, impacted by reduced tonnes and grades from underground and open-pit mining, operational challenges, and a higher proportion of open-pit ore treated compared to Q4 2023. Total cash cost per ounce\* increased by 27% year-on-year in Q4 2024 compared to Q4 2023, mainly driven by 14% lower gold production and higher operating costs, partially offset by increased stockpile addition credits.

Kibali's gold production (on an attributable basis) was 309,000oz at a total cash cost\* of \$935/oz in 2024, compared to 343,000oz at a total cash cost\* of \$802/oz in 2023. Gold production decreased by 10% year-on-year in 2024 compared to 2023, mainly due to lower recovered grades from open-pit areas mined, driven by operational challenges and high initial waste stripping. This decrease was partially offset by higher open-pit tonnes treated compared to 2023. Total cash cost per ounce\* increased by 17% year-on-year in 2024 compared to 2023, mainly due to higher operating costs and lower production volumes. The cost increase was primarily attributed to greater open-pit mining volumes, reduced stockpile credits due to less full-grade ore mined, and a higher stripping ratio. Increased waste-stripping capital credits partially mitigated these factors. The weakening of the Congolese franc against the US dollar had a minimal impact on overall costs due to limited exposure to local currency expenses.

**AUSTRALIA REGION**

In the Australia region, gold production (on an attributable basis) was 166,000oz at a total cash cost\* of \$1,171/oz in Q4 2024, compared to 158,000oz at a total cash cost\* of \$1,177/oz in Q4 2023.

Gold production (on an attributable basis) was 572,000oz at a total cash cost\* of \$1,287/oz in 2024, compared to 562,000oz at a total cash cost\* of \$1,251/oz in 2023.

At Sunrise Dam, gold production was 66,000oz at a total cash cost\* of \$1,406/oz for Q4 2024, compared to 62,000oz at a total cash cost\* of \$1,314/oz in Q4 2023. Gold production increased by 6% year-on-year in Q4 2024 compared to Q4 2023, mainly driven by a 5% improvement in recovery, despite lower open-pit material mined, reduced milled tonnes, and additional shutdown activities. Total cash cost per ounce\* increased by 7% year-on-year in Q4 2024 compared to Q4 2023, mainly due to inventory movements.

Sunrise Dam’s gold production was 259,000oz at a total cash cost\* of \$1,343/oz in 2024, compared to 252,000oz at a total cash cost\* of \$1,318/oz in 2023. Gold production increased by 3% year-on-year in 2024 compared to 2023, mainly due to higher grades from the underground mine and higher recoveries.

Total cash cost\* per ounce increased by 2% year-on-year in 2024 compared to 2023, mainly due to longer haul distances, additional ground support requirements and plant shutdown activities during the year.

At Tropicana, gold production (on an attributable basis) was 100,000oz at a total cash cost\* of \$924/oz for Q4 2024, compared to 96,000oz at a total cash cost\* of \$1,015/oz in Q4 2023. Gold production increased by 4% year-on-year in Q4 2024 compared to Q4 2023, mainly driven by higher surface ore tonnes, improved mined grades, and better underground grades. Total cash cost per ounce\* decreased by 9% year-on-year in Q4 2024 compared to Q4 2023, reflecting higher gold production, driven by higher mined grade, as well as reduced open-pit costs due to lower total material moved, with starting face position variances and prior year delays. Additionally, improved stockpile material buildup resulted in cost efficiencies.

Tropicana’s gold production (on an attributable basis) was 313,000oz at a total cash cost\* of \$1,132/oz in 2024, compared to 310,000oz at a total cash cost\* of \$1,105/oz in 2023. Gold production marginally increased by 1% year-on-year in 2024 compared to 2023, mainly due to higher grades from the open pit and underground mines, partly offset by lower tonnes milled. Total cash cost per ounce\* increased by 2% in 2024 compared to 2023, primarily due to higher underground and surface mining costs driven by longer haul distances. Operations were also impacted by a significant rain event in Q1 2024 that disrupted surface, underground, and milling activities, contributing to higher costs and logistical challenges.

AMERICAS REGION

In the Americas region, gold production was 144,000oz at a total cash cost\* of \$1,035/oz in Q4 2024, compared to 139,000oz at a total cash cost\* of \$1,017/oz in Q4 2023.

Gold production was 526,000oz at a total cash cost\* of \$1,027/oz in 2024, compared to 502,000oz at a total cash cost\* of \$1,122/oz in 2023.

In Brazil, at Cuiabá (AGA Mineração), gold production was 75,000oz at a total cash cost\* of \$859/oz for Q4 2024, compared to 73,000oz at a total cash cost\* of \$957/oz in Q4 2023. Gold production rose by 3% year-on-year in Q4 2024 compared to Q4 2023, primarily driven by higher recovered grades at Cuiabá mainly due to improved mining performance and Full Asset Potential initiatives, despite a 23% reduction in ore treated compared to Q4 2023. Total cash cost per ounce\* decreased by 10% year-on-year in Q4 2024 compared to Q4 2023, mainly driven by lower processing volumes and the absence of one-time legal compliance costs from 2023, partially offset by higher labour costs due to insourcing at Cuiabá.

Gold production was 271,000oz at a total cash cost\* of \$876/oz in 2024, compared to 252,000oz at a total cash cost\* of \$1,041/oz in 2023. Gold production increased by 8% year-on-year in 2024 compared to 2023, mainly driven by higher recovered grades at Cuiabá (5.89g/t in 2024 vs 4.82g/t in 2023) despite a 12% reduction in ore-treated volumes. Improved mining performance and the implementation of Full Asset Potential initiatives enhanced dilution control and recovery rates. Total cash cost\* per ounce decreased by 16% year-on-year in 2024 compared to 2023, mainly reflecting higher production volumes and reduced operating costs. Key savings resulted from insourcing services and process improvements, which reduced contractor costs by \$25m. Lower costs related to legal compliance activities initially undertaken in 2023, including tailings management and emergency planning measures, also contributed to savings. Increased labour costs partially offset this decrease due to workforce adjustments to support mining insourcing. The 2023 stoppage of the Queiroz metallurgical plant, mandated by the Brazilian authorities, significantly impacted production in early 2023 but did not recur in 2024, further aiding cost efficiency.

Serra Grande, Brazil

At Serra Grande, gold production was 22,000oz at a total cash cost\* of \$1,338/oz for Q4 2024, compared to 25,000oz at a total cash cost\* of \$1,307/oz in Q4 2023. Gold production decreased

QUARTER AND YEAR IN REVIEW CONTINUED

by 12% year-on-year in Q4 2024 compared to Q4 2023 mainly due to a lower recovered grade, impacted by operational restrictions in accessing the high-grade Ingá stope. Total cash cost per ounce\* increased by 2% year-on-year in Q4 2024 compared to Q4 2023, mainly driven by higher processed tonnes, lower recovered grades, and increased labour costs, partially offset by the weakening of the Brazilian real against the US dollar, cost-saving initiatives, and reduced contractor and consulting expenses.

Serra Grande’s gold production was 80,000oz at a total cash cost\* of \$1,411/oz in 2024, compared to 86,000oz at a total cash cost\* of \$1,498/oz in 2023. Gold production decreased by 7% year-on-year compared to 2023, primarily due to reduced tonnes processed (1,039kt in 2024 vs. 1,125kt in 2023). This decrease was partially offset by a slightly higher recovered grade of 2.39g/t compared to 2.37g/t in 2023. Total cash cost per ounce\* decreased by 6% year-on-year in 2024 compared to 2023, mainly driven by lower variable costs resulting from reduced mining and processing volumes. Cost savings were achieved through insourcing underground development activities, which reduced contractor costs and lower spending on technical consulting services related to Full Asset Potential initiatives conducted in 2023. Additionally, the weakening of the Brazilian real against the US dollar and reduced costs for consumables and services further contributed to the improvement.

mainly driven by lower silver by-product revenue, reduced stripping cost capitalisation, higher mining volumes, inflationary pressures on materials and labour, and increased royalties, partially offset by a weaker Argentinian peso against the US dollar.

Cerro Vanguardia’s gold production was 175,000oz at a total cash cost\* of \$1,073/oz in 2024, compared to 164,000oz at a total cash cost\* of \$1,045/oz in 2023. Gold production increased by 7% year-on-year in 2024 compared to 2023, mainly driven by improved feed grades and better heap leach performance. Total cash cost per ounce\* increased by 3% year-on-year in 2024 compared to 2023, primarily due to cost increases related to wages, materials, and services. The weakening of the Argentinian peso against the US dollar partially offset this increase. Additional cost pressures came from higher royalties, reflecting increased gold sales and prices and greater consumption of materials and services due to higher mining activity. The cost increase was also mitigated by higher by-product revenue from improved silver prices (\$28/oz in 2024 vs. \$23/oz in 2023).

Cerro Vanguardia, Argentina

**In Argentina, at Cerro Vanguardia,** gold production was 47,000oz at a total cash cost\* of \$1,155/oz during Q4 2024, compared to 41,000oz a total cash cost\* of \$943/oz in Q4 2023. Gold production increased by 15% year-on-year in Q4 2024 compared to Q4 2023, mainly driven by improved plant and heap leach performance and higher grades. Total cash cost per ounce\* increased by 22% year-on-year in Q4 2024 compared to Q4 2023,

**OVERVIEW**

Obuasi, Ghana

The last phase of the Obuasi redevelopment project, Phase 3, was completed on 20 December 2024 and the project was handed over to the operations team for final testing, ramp-up and commissioning. This marked the end of a project which started in 2018 with the aim of getting the mine both refurbished and modernised while addressing the historical production challenges centered around dewatering, ventilation, and material handling.

Phase 1, completed in 2019, returned a refurbished plant to production with capacity to treat 2,000tpd. Phase 2 further increased the plant capacity to 6,000tpd and introduced the first underground shaft (KRS) to the Obuasi system in 2021. The last phase, Phase 3, refurbished the deeper KMS and BSVS shafts, which will support ore production up to 6,000tpd to match the plant capability. Phase 3, which was delayed by nine months due to the unexpected presence of significant mud build-up at 50 and 51 levels, has successfully dewatered the mine which had been flooded since 2018. The entire KMS surface infrastructure has been rebuilt and refurbished, to support production from existing areas and allow access to the deeper ore bodies of block 10 lower and future high-grade block 11.

Phase 3 also introduced a new exhaust ventilation system, adding 750m<sup>3</sup>/sec of ventilation while increasing dewatering capacity to above 21ML per day. This increased capability will support mining in the central and lower blocks.

Lastly, to support underground ore handing and hoisting, Phase 3 introduced an electric rail haulage system, allowing underground material to be efficiently transported from the southern mining blocks to KMS for hoisting, thereby decongesting the decline system while relieving some of the ventilation requirements. Phase 3 introduced a centralised control centre to monitor and manage all mining and haulage activities. Other Phase 3 activities included replacing the entire electrical system, removing centralised compressed air systems, returning an underground crusher plant to service, and introducing shaft loading systems at 4400L. Together, these systems will add a cost-effective, energy-efficient, and reliable material handling infrastructure to the Obuasi mine. Phase 3 closes at \$140m against a budget of \$161m, and the overall Obuasi redevelopment project closes at \$812m.

**UHDF NOW PROVEN, WILL RAMP UP TO PROVIDE GROWTH OUNCES**

- Underhand Drift and Fill (UHDF) mining method contributed 31.6kt @ 12.17g/t for 12.4Koz mined in 2024.
- First and second panels of the 8m uppers were successfully mined in August and September 2024 respectively and successfully filled with paste.
- Third panel of the 8m uppers was mined in November 2024 and filled with paste.
- First UHDF reef drive of the 3500-level development commenced in December and has been completed and filled with paste.
- Development of the of 3500-level drift 2 is currently ongoing.
- Operational readiness review of additional UHDF work areas in Block 8 and Block 10 has commenced.

**OBUASI GOLD PRODUCTION OUTLOOK**

The gold production guidance provided for the Obuasi mine in November 2024 remains unchanged.

Period	Gold production
2025	250koz - 300koz
2026	300koz - 350koz
2027	325koz - 375koz
2028	375koz - 425koz

*Estimates assume neither operational or labour interruptions, or power disruptions, nor further changes to asset portfolio and/or operating mines and have not been reviewed by AngloGold Ashanti's external auditors. Other unknown or unpredictable factors, or factors outside the Company's control, including inflationary pressures on its cost base, could also have material adverse effects on AngloGold Ashanti's future results and no assurance can be given that any expectations expressed by AngloGold Ashanti will prove to have been correct. Measures taken at AngloGold Ashanti's operations together with AngloGold Ashanti's business continuity plans aim to enable its operations to deliver in line with its production targets. Actual results could differ from guidance and any deviations may be significant. Please refer to the Risk Factors section in AngloGold Ashanti's annual report on Form 20-F for the financial year ended 31 December 2023 filed with the SEC.*

**CAPITAL PROJECTS UPDATE**

**TROPICANA**

The Havana underground decline development is progressing. Detailed infrastructure design is underway, and procurement of long lead items has commenced, with the primary purchase orders issued at the end of 2024. Production of first gold is expected in Q1 2027 as per the feasibility study.

**ESG RENEWABLES PROJECT**

The Tropicana solar farm and battery energy storage system were successfully commissioned in Q4 2024, resulting in the project's first renewable energy generation. Construction of the four wind turbines was completed and commissioning and reliability testing is in progress. The Tropicana renewable energy project is on track to reach full operation in Q1 2025.

**SUNRISE DAM CONCENTRATE LEACH**

The Concentrate Leach project, which will improve metallurgical recoveries at Sunrise Dam, was approved at the start of Q4 2024. Detailed engineering designs are in progress, and procurement of long lead items has commenced. The civil construction contractor mobilized to the site, and civil works are underway.

The Concentrate Leach project is on track for completion in Q4 2025.

**NEVADA**

In the United States, our greenfield concessions, including the North Bullfrog project and the adjacent Expanded Silicon project, are in the Beatty District in southern Nevada. The Expanded Silicon project comprises the Silicon and Merlin deposits.

**NORTH BULLFROG PROJECT ("NBP")**

In November 2024, the NBP received approval from the Management Investment Committee (MIC) to pursue the engineering design through the detailed engineering phase of the project. This scope is expected to be complete by the end of Q2 2025, representing approximately 65% of total engineering. A CAPEX control estimate for the project is expected to be available by end of Q2 2025. The project team plans to update the project's financial model during Q2 2025 and update the MIC and Board of Directors in July 2025.

Permitting processes are underway for the NBP. The first round of public scoping occurred in April 2024. The public's comments have been primarily focused on potential impacts to groundwater-dependent ecosystems within the upper reaches of the Amargosa River. The project team has been updating an alternative plan to consume less water in connection with the project's progress through the permitting process.

The NBP is expected to be the first of the Company's projects for the Nevada district. Apart from the initial production, it is anticipated to allow AngloGold Ashanti to build a cohesive project development team and improve understanding of the permitting and project construction processes in Nevada.

**EXPANDED SILICON**

The successful completion of the Expanded Silicon project concept study at the end of 2023 allowed the project to proceed to the next stage gate of pre-feasibility study (PFS). The project comprises the Silicon and Merlin deposits. This program is expected to continue to be performed throughout 2025, focusing on the completion of an extensive drilling program and further optimisation of development options identified during a project framing review held during Q1 2024. The Expanded Silicon deposit gold Inferred Mineral Resource for 2024 has grown due to exploration success and reinterpretation of the geological model to 12.91Moz.

**CORPORATE UPDATE****ISSUED SHARE CAPITAL**

As at 18 February 2025, the total issued ordinary share capital of the Company comprised 503,539,626 ordinary shares of \$1.00 each. Each AngloGold Ashanti ordinary share carries one voting right. The Company does not hold any of its ordinary shares in treasury.

This figure may be used by AngloGold Ashanti shareholders to determine whether they are required to notify their interest, or a change to their interest, in the Company under its Articles of Association or to comply with any other applicable laws and regulations.

**CHANGE IN BOARD OF DIRECTORS**

Effective 15 October 2024, Mr. Scott Lawson resigned from AngloGold Ashanti's Board of Directors. Mr. Lawson was an independent non-executive director and served as a member of the Audit and Risk Committee and the Social, Ethics and Sustainability Committee.

On 20 December 2024, the Company announced several changes to the composition of its Board Committees effective 1 January 2025. In addition, the Company announced that Mr. Rhidwaan Gasant, after serving 14 years on the Board, has decided not to stand for re-election at the 2025 Annual General Meeting ("2025 AGM"), following which he will retire as a non-executive director. Following the 2025 AGM, Mr. Alan Ferguson will succeed him as Lead Independent Director and step down as the Chair of the Audit and Risk Committee, upon which Ms. Diana Sands will become the new Chair of the Audit and Risk Committee. These changes remain subject to the re-election of the relevant directors at the 2025 AGM.

**YATELA SALE UPDATE**

On 17 October 2024, AngloGold Ashanti and IAMGOLD Corporation completed the sale of each of their 40 percent interests in Société d'Exploitation des Mines d'Or de Yatela S.A. ("Yatela"), the company operating the Yatela gold mine, to the Government of Mali. Following completion of this transaction, AngloGold Ashanti no longer owns any mining operations in Mali.

**CENTAMIN ACQUISITION**

On 22 November 2024, AngloGold Ashanti completed its acquisition of Centamin plc, a Jersey gold mining and exploration company whose primary asset is the Sukari gold mine in Egypt, for a consideration of approximately \$2.2bn, comprising a combination of AGA shares and cash.

**UPDATE ON THE PROPOSED GHANA JOINT VENTURE**

Despite constructive engagement with the Government of Ghana following the announcement of the proposed joint venture in March 2023, the requisite approvals by the Government for the proposed joint venture have not yet been obtained. Following the recent national elections, Gold Fields and AngloGold Ashanti are working to engage with the new Government on the potential joint venture.

Gold Fields and AngloGold Ashanti continue to believe that a combination of Tarkwa and Iduapriem into a single managed entity is compelling, given that it is anticipated to extend life of mine, increase production and lower costs, thereby creating value for all stakeholders. Gold Fields and AngloGold Ashanti continue to pursue improvements to their respective assets.

**EXPLORATION UPDATE**

For detailed disclosure on the exploration work done for the three months and year ended 31 December 2024, see the Exploration Update document on the Company's website at [www.anglogoldashanti.com](http://www.anglogoldashanti.com) on both brownfield and greenfield exploration programmes.

## GROUP INCOME STATEMENT

US Dollar million, except as otherwise noted

	Quarter ended Dec 2024 Unaudited	Quarter ended Dec 2023 Unaudited	Year ended Dec 2024 Unaudited	Year ended Dec 2023 Unaudited
Revenue from product sales	1,750	1,256	5,793	4,582

<sup>(1)</sup> On 22 November 2024, AngloGold Ashanti completed its acquisition of Centamin Plc, a Jersey gold mining and exploration company whose primary asset is the Sukari gold mine in Egypt, for a consideration of approximately \$2.2bn, comprising a combination of AGA shares and cash. The fair value of material assets acquired, and material liabilities assumed at the acquisition date on a provisional basis is as follows: tangible assets \$3.4bn, inventories (non-current) \$198m, inventories (current) \$196m, trade, other receivables and other assets (current) \$56m, cash and cash equivalents \$216m, long-term environmental rehabilitation and other provisions \$51m and trade and other payables (current) \$115m. The fair value of the non-controlling interest is \$1.7bn.

<sup>(2)</sup> The taxation asset has been presented separately on the statement of financial position (previously included in trade and other receivables).

<sup>(1)</sup> The acquisition of Centamin Plc on 22 November 2024 resulted in cash acquired of \$216m partly offset with cash settled in the purchase consideration of \$148m.

## GOLD AND BY-PRODUCT INCOME

AngloGold Ashanti's operating segments are being reported based on the financial information regularly provided to the Chief Executive Officer and the Executive Committee, collectively identified as the Chief Operating Decision Maker (CODM). Individual members of the Executive Committee are responsible for geographical regions of the business. Under the Group's operating model, the financial results and the composition of the operating segments are reported to the CODM per geographical region in addition to the Projects' segment which comprises all the major non-sustaining capital projects with the potential to be developed into operating entities. In addition to the geographical reportable segments structure, the Group has voluntarily disaggregated and disclosed the financial information on a line-by-line basis for each mining operation to facilitate comparability of mine performance.

## Year in review

The AngloGold Ashanti gold Measured and Indicated Mineral Resource increased from 59.9Moz at 31 December 2023 to 67.1Moz at 31 December 2024. Additions included the acquisition of Centamin assets (Sukari and Doropo) of 2.8Moz, exploration and modelling changes of 2.6Moz, changes in economic assumptions of 1.6Moz and other changes of 0.2Moz. As a result, the net year-on-year gold Measured and Indicated Mineral Resource addition was 7.2Moz.

The AngloGold Ashanti gold Inferred Mineral Resource increased from 46.4Moz at 31 December 2023 to 55.0Moz at 31 December 2024. Additions included the acquisition of Centamin assets (Sukari, Doropo and ABC) of 3.0Moz, exploration and modelling changes of 3.6Moz and changes in economic assumptions of 2.1Moz. The additions were partially offset by reductions which included other factors of 0.1Moz. As a result, the net year-on-year gold Inferred Mineral Resource addition was 8.6Moz.

The AngloGold Ashanti copper Mineral Resource remained unchanged at 1.32Mt (2,902Mlb) Measured and Indicated Mineral Resource and 1.47Mt (3,231Mlb) Inferred Mineral Resource at 31 December 2024 as compared to 31 December 2023, as a feasibility study optimisation is still ongoing and no additional exploration has been completed at Quebradona.

The AngloGold Ashanti gold Mineral Reserve increased from 28.1Moz at 31 December 2023 to 31.2Moz at 31 December 2024. Additions included the acquisition of Centamin assets (Sukari and Doropo) of 4.1Moz, exploration and modelling changes of 2.4Moz and other changes of 0.8Moz. The additions were partially offset by reductions which included depletion of 2.8Moz and changes in economic assumptions of 1.4Moz. As a result, the net year-on-year gold Mineral Reserve addition was 3.1Moz.

The AngloGold Ashanti copper Mineral Reserve remained unchanged at 1.47Mt (3,250Mlb) at 31 December 2024 as compared to 31 December 2023, as a feasibility study optimisation is still ongoing and no additional exploration has been completed at Quebradona.

## Notes on the Mineral Resource and Mineral Reserve estimates

The Mineral Resource and Mineral Reserve stated herein were prepared in compliance with Subpart 1300 of Regulation S-K (17 CFR § 229.1300) ("Regulation S-K 1300"). Refer to Item 1300 (Definitions) of Regulation S-K for the meaning of the terms used in AngloGold Ashanti's Mineral Resource and Mineral Reserve reporting. The Mineral Resource and Mineral Reserve represent the amount of gold, copper, silver, sulphur and molybdenum estimated at 31 December 2024 and are based on information available at the time of estimation. Such estimates are, or will be, to a large extent, based on the prices of the respective commodities and interpretations of geologic data obtained from drill holes and other exploration techniques, which data may not necessarily be indicative of future results. AngloGold Ashanti publishes its Mineral Resource and Mineral Reserve on an annual basis and has re-estimated its Mineral Resource and Mineral Reserve at 31 December 2024, taking into account economic assumptions, changes to future production, capital expenditure and operating costs (if any), depletion, additions as well as any acquisitions or disposals during 2024. The legal tenure of each material property has been verified to the satisfaction of the accountable Qualified Person and all of the Mineral Reserve has been confirmed to be covered by the required mining permits or there exists a realistic expectation, based on applicable laws and regulations, that issuance of permits or resolution of legal issues necessary for mining and processing at a particular deposit will be accomplished in the ordinary course and in a timeframe consistent with AngloGold Ashanti's (or its joint venture partners') current mine plans. For the Mineral Reserve, the term "economically viable" means that profitable extraction or production has been established or analytically demonstrated in, at a minimum, a pre-feasibility study, to be economically viable under reasonable investment and market assumptions. Mineral Reserve is subdivided and reported, in order of increasing geoscientific knowledge and confidence, into Probable and Proven Mineral Reserve categories. Mineral Reserve is aggregated from the Probable and Proven Mineral

Reserve categories. Ounces of gold or silver or pounds of copper, sulphur or molybdenum included in the Probable and Proven Mineral Reserve are estimated and reported as delivered to plant (i.e., the point where material is delivered to the processing facility) and exclude losses during metallurgical treatment. In compliance with Regulation S-K 1300, the Mineral Resource herein is reported as exclusive of the Mineral Reserve before dilution and other factors are applied, unless otherwise stated. Mineral Resource is subdivided and reported, in order of increasing geoscientific knowledge and confidence, into Inferred, Indicated and Measured Mineral Resource categories. Ounces of gold or silver or pounds of copper, sulphur or molybdenum included in the Inferred, Indicated and Measured Mineral Resource are those contained *in situ* prior to losses during metallurgical treatment. While it would be reasonable to expect that the majority of Inferred Mineral Resource would upgrade to Indicated Mineral Resource with continued exploration, due to the uncertainty of Inferred Mineral Resource, it should not be assumed that such upgrading will always occur.

If estimations are required to be revised using significantly lower commodity prices, increases in operating costs, reductions in metallurgical recovery or other modifying factors, this could result in the Mineral Resource or Mineral Reserve not being mined or processed profitably, material write-downs of AngloGold Ashanti's investment in mining properties, goodwill and increased amortisation, reclamation and closure charges. If AngloGold Ashanti determines that certain of its Mineral Resource or Mineral Reserve have become uneconomic, this may ultimately lead to a reduction in its aggregate reported Mineral Resource or Mineral Reserve, respectively. Consequently, if AngloGold Ashanti's actual Mineral Resource and Mineral Reserve is less than current estimates, its business, prospects, results of operations and financial position may be materially impaired.

The pre-feasibility and feasibility studies for undeveloped ore bodies derive estimates of capital expenditure and operating costs based upon anticipated tonnage and grades of ore to be mined and processed, the predicted configuration of the ore body, expected recovery rates of metals from the ore, the costs of comparable facilities, the costs of operating and processing equipment and other factors. Actual operating and capital expenditure cost and economic returns on projects may differ significantly from original estimates. Further, it may take many years from the initial phases of exploration until commencement of production, during which time, the economic feasibility of production may change. The Mineral Resource is subject to further exploration and development, and is subject to additional risks, and no assurance can be given that they will eventually convert to future Mineral Reserve.

For additional information, refer to Table 1 (Summary Mineral Resource) and Table 2 (Summary Mineral Reserve) to Paragraph (b) of Item 1303 (Summary disclosure) of Regulation S-K below. These summary tables will also be presented in AngloGold Ashanti's annual report on Form 20-F for the financial year ended 31 December 2024 to be filed with the SEC. These summary tables include each class of Mineral Resource (Inferred, Indicated and Measured) together with total Measured and Indicated Mineral Resource, and each class of Mineral Reserve (Probable and Proven) together with total Mineral Reserve. The Mineral Resource at the end of the financial year ended 31 December 2024 was estimated using a gold price of \$1,900/oz (2023: \$1,750/oz), a copper price of \$3.50/lb (2023: \$3.50/lb), a silver price of \$23.00/oz (2023: \$21.64/oz) and a molybdenum price of \$12.00/lb (2023: \$12.00/lb), unless otherwise stated. The Mineral Reserve at the end of the financial year ended 31 December 2024 was estimated using a gold price of \$1,600/oz (2023: \$1,400/oz), a copper price of \$2.90/lb (2023: \$2.90/lb) and a silver price of \$19.50/oz (2023: \$19.58/oz), unless otherwise stated. The net difference between the Mineral Resource and Mineral Reserve at the end of the last completed financial year and the preceding financial year (if applicable) will be detailed for material properties in AngloGold Ashanti's annual report on Form 20-F for the financial year ended 31 December 2024 to be filed with the SEC.

### Notes

*The Mineral Resource exclusive of Mineral Reserve is defined as the inclusive Mineral Resource less the Mineral Reserve before dilution and other factors are applied.*

The below summary table is prepared in accordance with Table 1 to Paragraph (b) of Item 1303 of Regulation S-K - Summary Mineral Resource for gold at the end of the financial year ended 31 December 2024, based on an estimated gold price of \$1,900/oz, unless otherwise stated.

Notes:

Rounding of numbers may result in computational discrepancies in the Mineral Resource tabulations. To reflect that figures are not precise calculations and that there is uncertainty in their estimation, AngloGold Ashanti reports tonnage, grade and content for gold to two decimals. All ounces are Troy ounces. "Moz" refers to million ounces. The Mineral Resource tonnages and grades are reported in situ and stockpiled material is reported as broken material.

<sup>(1)</sup> All disclosure of Mineral Resource is exclusive of Mineral Reserve. The Mineral Resource exclusive of Mineral Reserve is defined as the inclusive Mineral Resource less the Mineral Reserve before dilution and other factors are applied.

- (2) Mineral Resource attributable to AngloGold Ashanti's percentage interest shown.
- (3) "Tonnes" refers to a metric tonne which is equivalent to 1,000 kilograms.
- (4) Kibali is operated by Barrick Gold Corporation ("Barrick"). AngloGold Ashanti has recognised that in preparing this information, the Qualified Persons have relied on information provided by Barrick. In 2024, a cut-off grade range from 0.61g/t to 0.96g/t (varying according to rock type) was applied to the open pit, a cut-off grade of 0.50g/t was applied to the stockpile, and a cut-off grade of 0.94g/t was applied to the underground. In 2024, a metallurgical recovery factor range from 75.5% to 91% (varying according to area) was applied to the open pit and stockpile, and a metallurgical recovery factor of 90.0% was applied to the underground.
- (5) In 2024, for Obuasi, a cut-off grade of 1.07g/t was applied to the open pit, and a cut-off grade range from 2.75g/t to 3.79g/t (varying according to area) was applied to the underground. In 2024, a metallurgical recovery factor of 88% was applied to the open pit and underground.
- (6) In 2024, for Geita, a cut-off grade range from 0.50g/t to 1.40g/t (varying according to area) was applied to the open pit, and a cut-off grade range from 0.88g/t to 2.72g/t (varying according to area) was applied to the underground. In 2024, a metallurgical recovery factor of 91.70% was applied to the open pit, a metallurgical recovery factor range from 91.07% to 91.63% (varying according to area) was applied to the stockpile, and a metallurgical recovery factor range from 78.02% to 93.37% (varying according to area) was applied to the underground.
- (7) Acquired by AngloGold Ashanti through its acquisition of Centamin plc in November 2024. Mineral Resource based on a gold price of \$2,000/oz.
- (8) In 2024, for Sukari, a cut-off grade of 0.30g/t was applied to the open pit, a cut-off grade of 0.40g/t was applied to the stockpile, and a cut-off grade of 1.00g/t was applied to the underground. In 2024, a metallurgical recovery factor of 88.40% was applied to the open pit, stockpile and underground.
- (9) The Córrego do Sítio ("CdS") operation was placed on care and maintenance in August 2023.
- (10) Property currently in force majeure. Based on a gold price of \$1,400/oz. The delineation of the Los Nevados Páramo by Resolution 1987/2016 in November 2016 is considered a risk or uncertainty to the Mineral Resource estimate, and Resolution 1987/2016 is currently being contested before the Colombian courts. This puts potentially approximately 13.99Moz (50%) of the Mineral Resource at risk.
- (11) Property currently in an exploration stage.
- (12) Property currently in a development stage.
- (13) Property currently in a production stage.
- (14) Based on a gold price of \$1,500/oz.
- (15) Based on a gold price of \$1,700/oz. The Sterling project includes the Sterling mine, a mining property currently on care and maintenance, and the Crown Block deposits of SNA, Secret Pass and Daisy and the tenements surrounding the properties which are all in exploration stage.
- (16) The Expanded Silicon project includes the Silicon and Merlin deposits. The Mineral Resource Silicon deposit is based on a gold price of \$1,750/oz.

The below summary table is prepared in accordance with Table 1 to Paragraph (b) of Item 1303 of Regulation S-K - Summary Mineral Resource for copper at the end of the financial year ended 31 December 2024, based on an estimated copper price of \$3.50/lb.

MINERAL RESOURCE <sup>(1)</sup>	AT 31 DECEMBER 2024

Notes:

Rounding of numbers may result in computational discrepancies in the Mineral Resource tabulations. To reflect that figures are not precise calculations and that there is uncertainty in their estimation, AngloGold Ashanti reports tonnage and content (tonnes million) to two decimals, grade to one decimal, and content (pounds million) with no decimals for sulphur. The Mineral Resource tonnages and grades are reported *in situ* and stockpiled material is reported as broken material. The reported tonnages for the sulphur by-product are an outcome from the associated conceptual pit shell or mineable shapes, that have been determined based on the extraction of the primary mineral which is gold.

- <sup>(1)</sup> All disclosure of Mineral Resource is exclusive of Mineral Reserve. The Mineral Resource exclusive of Mineral Reserve is defined as the inclusive Mineral Resource less the Mineral Reserve before dilution and other factors are applied.
- <sup>(2)</sup> "Tonnes" refers to a metric tonne which is equivalent to 1,000 kilograms.
- <sup>(3)</sup> Property currently in a production stage. A sulphuric acid price of \$168/t is used.

The below summary table is prepared in accordance with Table 2 to Paragraph (b) of Item 1303 of Regulation S-K - Summary Mineral Reserve for gold at the end of the financial year ended 31 December 2024, based on an estimated gold price of \$1,600/oz, unless otherwise stated.

MINERAL RESERVE	AT 31 DECEMBER 2024

Notes:

Rounding of numbers may result in computational discrepancies in the Mineral Reserve tabulations. To reflect that figures are not precise calculations and that there is uncertainty in their estimation, AngloGold Ashanti reports tonnage, grade and content for gold to two decimals. All ounces are Troy ounces. "Moz" refers to million ounces. The Mineral Reserve tonnages and grades are estimated and reported as delivered to plant (i.e., the point where material is delivered to the processing facility).

(1) Mineral Reserve attributable to AngloGold Ashanti's percentage interest shown.

(2) "Tonnes" refers to a metric tonne which is equivalent to 1,000 kilograms.

(3) Kibali is operated by Barrick. AngloGold Ashanti has recognised that in preparing this information, the Qualified Persons have relied on information provided by Barrick. Based on a gold price of \$1,400/oz. In 2024, the Pamao and Pamao South pit shells were determined based on a gold price of \$1,700/oz, but financially evaluated and found to be profitable at a gold price of \$1,400/oz (supporting the 2024 Mineral Reserve declaration). This is exceptional and is driven by the need to create space for in pit tailings, further saving on capital costs. In 2024, a cut-off grade range from 0.88g/t to 1.30g/t (varying according to area) was applied to the open pit, a cut-off grade of 0.50g/t was applied to the stockpile, and a cut-off grade of 2.06g/t was applied to the underground. In 2024, a metallurgical recovery factor range from 75.5% to 91% (varying according to area) was applied to the open pit and stockpile, and a metallurgical recovery factor of 90.0% was applied to the underground.

- (4) In 2024, for Obuasi, a cut-off grade range from 5.69g/t to 7.42g/t was applied to the underground (varying according to area). In 2024, a metallurgical recovery factor of 88% was applied to the open pit and underground.
- (5) In 2024, for Geita, a cut-off grade of 1.00g/t was applied to the open pit, a cut-off grade range from 0.70g/t to 0.80g/t (varying according to area) was applied to the stockpile, and a cut-off grade range from 1.98g/t to 2.88g/t (varying according to area) was applied to the underground. In 2024, a metallurgical recovery factor of 91.70% was applied to the open pit, a metallurgical recovery factor range from 91.07% to 91.63% (varying according to area) was applied to the stockpile, and a metallurgical recovery factor range from 78.02% to 93.37% (varying according to area) was applied to the underground.
- (6) Acquired by AngloGold Ashanti through its acquisition of Centamin plc in November 2024. Mineral Reserve based on a gold price of \$1,450/oz.
- (7) In 2024, for Sukari, a cut-off grade of 0.44g/t was applied to the open pit and stockpile, and a cut-off grade of 2.34g/t was applied to the underground. In 2024, a metallurgical recovery factor of 88.40% was applied to the open pit, stockpile and underground.
- (8) Property currently in a production stage.
- (9) Property currently in a development stage.
- (10) The CdS operation was placed on care and maintenance in August 2023.
- (11) Based on a gold price of \$1,400/oz.
- (12) Based on a gold price of \$1,500/oz.
- (13) Based on a gold price of \$1,200/oz.
- (14) Based on a gold price of \$1,475/oz.
- (15) Based on a gold price of \$1,550/oz.

The below summary table is prepared in accordance with Table 2 to Paragraph (b) of Item 1303 of Regulation S-K - Summary Mineral Reserve for copper at the end of the financial year ended 31 December 2024, based on an estimated copper price of \$2.90/lb.

MINERAL RESERVE	AT 31 DECEMBER 2024											
	Proven				Probable				Total Mineral Reserve

**Notes:**

Rounding of numbers may result in computational discrepancies in the Mineral Reserve tabulations. To reflect that figures are not precise calculations and that there is uncertainty in their estimation, AngloGold Ashanti reports tonnage and grade to two decimals and content for copper with no decimals. "Mlb" refers to million pounds. The reference point for the Mineral Reserve is the point of delivery to the process plant. The Mineral Reserve tonnages and grades are estimated and reported as delivered to plant (i.e., the point where material is delivered to the processing facility).

(1) "Tonnes" refers to a metric tonne which is equivalent to 1,000 kilograms.

(2) Property currently in a development stage.

The below summary table is prepared in accordance with Table 2 to Paragraph (b) of Item 1303 of Regulation S-K - Summary Mineral Reserve for silver at the end of the financial year ended 31 December 2024, based on an estimated silver price of \$19.50/oz, unless otherwise stated.

Notes:

Rounding of numbers may result in computational discrepancies in the Mineral Reserve tabulations. To reflect that figures are not precise calculations and that there is uncertainty in their estimation, AngloGold Ashanti reports tonnage, grade and content for silver to two decimals. All ounces are Troy ounces. "Moz" refers to million ounces. The Mineral Reserve tonnages and grades are estimated and reported as delivered to plant (i.e., the point where material is delivered to the processing facility). The reported tonnages for the silver by-product are an outcome from the associated pit or underground mine plans, that have been determined based on the extraction of the primary mineral. The primary mineral for all properties is gold (except for Quebradona where the primary mineral is copper and a net smelter return (NSR) approach has been adopted).

- (1) Mineral Reserve attributable to AngloGold Ashanti's percentage interest shown.
- (2) "Tonnes" refers to a metric tonne which is equivalent to 1,000 kilograms.
- (3) Property currently in a development stage.
- (4) Property currently in a production stage.
- (5) Based on a silver price of \$18.67/oz.
- (6) Based on a silver price of \$19.58/oz.

The below summary table is prepared in accordance with Table 2 to Paragraph (b) of Item 1303 of Regulation S-K - Summary Mineral Reserve for sulphur at the end of the financial year ended 31 December 2024.

Notes:

Rounding of numbers may result in computational discrepancies in the Mineral Reserve tabulations. To reflect that figures are not precise calculations and that there is uncertainty in their estimation, AngloGold Ashanti reports tonnage and content (tonnes million) to two decimals, grade to one decimal, and content (pounds million) with no decimals for sulphur. The Mineral Reserve tonnages and grades are estimated and reported as delivered to plant (i.e., the point where material is delivered to the processing facility). The reported tonnages for the sulphur by-product are an outcome from the associated pit or underground mine plans, that have been determined based on the extraction of the primary mineral which is gold.

- (1) "Tonnes" refers to a metric tonne which is equivalent to 1,000 kilograms.
- (2) Property currently in a production stage. A sulphuric acid price of \$168/t is used.

AngloGold Ashanti plc today announces an interim dividend for the six months ended 31 December 2024 of 69 US cents per share. In respect of the interim dividend, the timelines, including dates for currency conversions, set out below will apply.

### To holders of ordinary shares on the New York Stock Exchange (NYSE)

	2025
Ex-dividend on NYSE	Friday, 14 March
Record date	Friday, 14 March
Payment date	Friday, 28 March

### To holders of ordinary shares on the South African Register

Additional information for South African resident shareholders of AngloGold Ashanti:

Shareholders registered on the South African section of the register are advised that the distribution of 69 US cents per ordinary share will be converted to South African rands at the applicable exchange rate.

In compliance with the requirements of Strate and the Johannesburg Stock Exchange (JSE) Listings Requirements, the salient dates for payment of the dividend are as follows:

	2025
Declaration date	Wednesday, 19 February
Currency conversion rate for South African rands announcement date	Friday, 7 March
Last date to trade ordinary shares cum dividend	Tuesday, 11 March
Ordinary shares trade ex-dividend	Wednesday, 12 March
Record date	Friday, 14 March
Payment date	Friday, 28 March

Dividends in respect of dematerialised shareholdings will be credited to shareholders' accounts with the relevant CSDP (as defined below) or broker.

To comply with further requirements of Strate, share certificates may not be dematerialised or rematerialised between Wednesday, 12 March 2025 and Friday, 14 March 2025, both days inclusive. No transfers between South African, NYSE and Ghanaian share registers will be permitted between Friday, 7 March 2025 and Friday, 14 March 2025, both days inclusive.

Details of the exchange rates applicable to the dividend and a summary of the tax considerations applicable to South African shareholders is expected to be published on Friday, 7 March 2025.

### To Beneficial Owners on the Ghana sub-register holding shares through the nominee arrangement with the Central Securities Depository (GH) LTD

	2025
Currency conversion date	Friday, 7 March
Last date to trade and to register shares cum dividend	Tuesday, 11 March
Shares trade ex-dividend	Wednesday, 12 March
Record date	Friday, 14 March
Approximate payment date of dividend	Friday, 28 March

### To Beneficial Owners holding Ghanaian Depository Shares (GhDSs) and acting by National Trust Holding Company Ltd as depository agent 100 GhDSs represent one ordinary share

	2025
Currency conversion date	Friday, 7 March
Last date to trade and to register GhDSs cum dividend	Tuesday, 11 March
GhDSs trade ex-dividend	Wednesday, 12 March
Record date	Friday, 14 March
Approximate payment date of dividend	Friday, 28 March

Beneficial owners on the Ghana sub-register holding shares and beneficial owners holding GhDSs are advised that the distribution of 69 US cents per ordinary share will be converted to Ghanaian cedis at the applicable exchange rate. Assuming an exchange rate of US\$1/¢15.5000, the gross dividend payable per share, is equivalent to ca. ¢10.695 Ghanaian cedis. However, the actual rate of payment will depend on the exchange rate on the date for currency conversion.

### Entitlement to interim dividends

A "Shareholder of Record" is a person appearing on the register of members of the Company in respect of ordinary shares at the close of business on the relevant record date. A "Beneficial Owner" is a person who holds ordinary shares of the Company through a bank, broker, central securities depository participant ("CSDP"), Shareholder of Record or other agent (sometimes referred to as holding shares "in street name").

## NON-GAAP DISCLOSURE

From time to time AngloGold Ashanti may publicly disclose certain "Non-GAAP" financial measures in the course of its financial presentations, earnings releases, earnings conference calls and otherwise.

In this document, AngloGold Ashanti presents the financial items "total cash costs", "total cash costs per ounce", "all-in sustaining costs", "all-in sustaining costs per ounce", "all-in costs", "all-in costs per ounce", "average gold price received per ounce", "sustaining capital expenditure" and "non-sustaining capital expenditure", which have been determined using industry guidelines and practices and are not measures under IFRS. In addition, AngloGold Ashanti also presents the financial items "Adjusted EBITDA", "Adjusted net debt" and "free cash flow" which are not measures under IFRS either. An investor should not consider these items in isolation or as alternatives to cost of sales, gold income, capital expenditure, profit (loss) before taxation, total borrowings, cash flows from operating activities or any other measure of financial performance presented in accordance with IFRS or as an indicator of the Group's performance. The Group uses certain Non-GAAP performance measures and ratios in managing the business and may provide users of this financial information with additional meaningful comparisons between current results and results in prior operating periods. Non-GAAP financial measures should be viewed in addition to, and not as an alternative to, the reported operating results or any other measure of performance prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures that other companies use.

During the financial year ended 31 December 2024, AngloGold Ashanti's reporting for managed operations shifted from an attributable basis of reporting to a consolidated basis of reporting. The change in reporting only impacts managed operations with non-controlling interests (i.e., Siguri, Cerro Vanguardia and Sukari), whereas joint operations (i.e., Tropicana) which are proportionately consolidated remain unaffected. Non-managed joint ventures (i.e., Kibali) which are accounted for under the equity method also remain unaffected and their gold production, related unit revenue and cost metrics continue to be reported on an attributable basis. As a result of this change in reporting, certain adjustments to exclude non-controlling interests on gold production, related unit revenue and cost metrics have been discontinued. The metrics for the three months and year ended 31 December 2023 have been adjusted to reflect this change in reporting.

The term "managed operations" refers to subsidiaries managed by AngloGold Ashanti and included in its consolidated reporting, while the term "non-managed joint ventures" refers to equity-accounted joint ventures that are reported based on AngloGold Ashanti's share of attributable earnings and are not managed by AngloGold Ashanti. Managed operations are reported on a consolidated basis. Non-managed joint ventures are reported on an attributable basis.

## ALL-IN SUSTAINING AND ALL-IN COSTS

During 2018, the World Gold Council ("WGC"), an industry body, published a revised Guidance Note on "all-in sustaining costs" and "all-in costs" metrics, which gold mining companies can use to supplement their overall Non-GAAP disclosure. The WGC worked closely with its members (including AngloGold Ashanti) to develop these Non-GAAP measures which are intended to provide further transparency into the full cost associated with producing gold. It is expected that these metrics, in particular, the "all-in sustaining cost" and "all-in cost" metrics which AngloGold Ashanti provides herein, will be helpful to investors, governments, local communities and other stakeholders in understanding the economics of gold mining.

"All-in sustaining costs" is a Non-GAAP measure which is an extension of the existing "total cash costs" metric and incorporates all costs related to sustaining production and in particular, recognises sustaining capital expenditures associated with developing and maintaining gold mines. In addition, this metric includes the cost associated with Corporate Office structures that support these operations, the community and environmental rehabilitation costs attendant with responsible mining and any exploration and evaluation cost associated with sustaining current operations. "All-in sustaining costs per ounce - managed operations" (\$/oz) is calculated by dividing the consolidated US dollar value of this cost metric by the consolidated ounces of gold sold. "All-in sustaining costs per ounce - non-managed joint ventures" (\$/oz) is calculated by dividing the attributable US dollar value of this cost metric by the attributable ounces of gold sold.

"All-in costs" is a Non-GAAP measure comprising "all-in sustaining costs" including additional costs which reflect the varying costs of producing gold over the life-cycle of a mine including costs incurred at new operations and costs related to growth projects at existing operations, which are expected to increase production.

CONTINUED

"All-in costs per ounce - managed operations" (\$/oz) is calculated by dividing the consolidated US dollar value of this cost metric by the consolidated ounces of gold sold. "All-in costs per ounce - non-managed joint ventures" (\$/oz) is calculated by dividing the attributable US dollar value of this cost metric by the attributable ounces of gold sold.

### TOTAL CASH COSTS

"Total cash costs" is calculated in accordance with the guidelines of the Gold Institute industry standard and industry practice and is a Non-GAAP measure. The Gold Institute, which has been incorporated into the National Mining Association, is a non-profit international association of miners, refiners, bullion suppliers and manufacturers of gold products, which developed a uniform format for reporting total cash costs on a per ounce basis.

The guidance was first adopted in 1996 and revised in November 1999.

"Total cash costs" is a Non-GAAP measure and, as calculated and reported by AngloGold Ashanti, include costs for all mining, processing, onsite administration costs, royalties and production taxes, as well as contributions from by-products, but exclude amortisation of tangible, intangible and right of use assets, rehabilitation costs and other non-cash costs, retrenchment costs, corporate administration, marketing and related costs, capital costs and exploration costs. "Total cash costs per ounce - managed operations" (\$/oz) is calculated by dividing the consolidated US dollar value of this cost metric by the consolidated ounces of gold produced. "Total cash costs per ounce - non-managed joint ventures" (\$/oz) is calculated by dividing the attributable US dollar value of this cost metric by the attributable ounces of gold produced.

### AVERAGE GOLD PRICE RECEIVED PER OUNCE

"Average gold price received per ounce" is a Non-GAAP measure which gives an indication of revenue earned per ounce of gold sold and serves as a benchmark of performance against the market spot gold price. "Average gold price received per ounce - managed operations" is calculated by dividing the consolidated US dollar value of this revenue metric by the consolidated ounces of gold sold. "Average gold price received per ounce - non-managed joint ventures" is calculated by dividing the attributable US dollar value of this revenue metric by the attributable ounces of gold sold.

### SUSTAINING CAPITAL EXPENDITURE

"Sustaining capital (expenditure)" is a Non-GAAP measure comprising capital expenditure incurred to sustain and maintain existing assets at their current productive capacity in order to achieve constant planned levels of productive output and capital expenditure to extend useful lives of existing production assets. This includes replacement of vehicles, plant and machinery, Mineral Reserve development, deferred stripping and capital expenditure related to financial benefit initiatives, safety, health and the environment.

### NON-SUSTAINING EXPENDITURE

"Non-sustaining capital (expenditure)" is a Non-GAAP measure comprising capital expenditure incurred at new operations and capital expenditure related to 'major projects' at existing operations where these projects will materially increase production.

While the Gold Institute provided definitions for the calculation of "total cash costs" and the WGC published a revised Guidance Note on "all-in sustaining costs" and "all-in costs" metrics during 2018, the calculation of "total cash costs", "total cash costs per ounce", "all-in sustaining costs", "all-in sustaining costs per ounce", "all-in costs" and "all-in costs per ounce" may vary significantly among gold mining companies, and by themselves do not necessarily provide a basis for comparison with other gold mining companies. However, AngloGold Ashanti believes that "total cash costs", "all-in sustaining costs" and "all-in costs" in total by mine and per ounce by mine as well as "average gold price received per ounce", "sustaining capital expenditure" and "non-sustaining capital expenditure" are useful indicators to investors and management as they provide:

- an indication of profitability, efficiency and cash flows;
- the trend in costs as the mining operations mature over time on a consistent basis; and
- an internal benchmark of performance to allow for comparison against other mines, both within the Group and at other gold mining companies.

Management prepares its internal management reporting documentation, for use and decision making by the Chief Operating Decision Maker (CODM), on a total basis.

CONTINUED

The key metrics are based on the total ounces, gold income, "total cash costs", "all-in costs", "all-in sustaining costs", "sustaining capital expenditure" and "non-sustaining capital expenditure" from each operation and as a consequence includes AngloGold Ashanti's share of the "total cash costs", "all-in costs", "all-in sustaining costs", "sustaining capital expenditure" and "non-sustaining capital expenditure" of its non-managed joint ventures that are accounted for under the equity method. In a capital intensive industry, this basis allows management to make operating and resource allocation decisions on a comparable basis between mining operations irrespective of whether they are consolidated or accounted for under the equity method. This basis of calculating the metrics is consistent with the WGC's Guidance Note on "all-in sustaining costs" and "all-in costs" metrics.

Although AngloGold Ashanti has shareholder rights and board representation commensurate with its ownership interests in its equity-accounted non-managed joint ventures and reviews the underlying operating results including "total cash costs", "all-in costs", "all-in sustaining costs", "sustaining capital expenditure" and "non-sustaining capital expenditure" with them at each reporting period, it does not have direct control over their operations or resulting revenue and expenses, nor does it have a proportionate legal interest in each financial statement line item. AngloGold Ashanti's use of "total cash costs", "all-in costs", "all-in sustaining costs", "sustaining capital expenditure" and "non-sustaining capital expenditure" on a total basis, is not intended to imply that it has any such control or proportionate legal interest, but rather to reflect the Non-GAAP measures on a basis consistent with its internal and external segmental reporting.

### ADJUSTED EBITDA

"Adjusted EBITDA" is a Non-GAAP measure and, as calculated and reported by AngloGold Ashanti, includes profit (loss) before taxation, amortisation of tangible, intangible and right of use assets, retrenchment costs at the operations, finance income, other gains (losses), care and maintenance costs, finance costs and unwinding of obligations, impairment and derecognition of assets, impairment of investments, profit (loss) on disposal of assets and investments, gain (loss) on early settlement of hedge contracts, fair value adjustments, repurchase premium and costs on settlement of issued bonds and the share of associates' EBITDA. The Adjusted EBITDA calculation is based on the formula included in AngloGold Ashanti's Revolving Credit Facility Agreements for compliance with the debt covenant formula.

"Adjusted EBITDA margin" is calculated as the percentage of Adjusted EBITDA divided by revenue from product sales.

### ADJUSTED NET DEBT

"Adjusted net debt" is a Non-GAAP measure and, as calculated and reported by AngloGold Ashanti, includes total borrowings adjusted for the unamortised portion of borrowing costs and IFRS 16 lease adjustments; less cash restricted for use and cash and cash equivalents (net of bank overdraft). The Adjusted net debt calculation is based on the formula included in AngloGold Ashanti's Revolving Credit Facility Agreements for compliance with the debt covenant formula.

### FREE CASH FLOW

"Free cash flow" is a Non-GAAP measure and, as calculated and reported by AngloGold Ashanti, includes cash inflow from operating activities, less cash outflow from investing activities and after finance costs, adjusted to exclude once-off acquisitions, disposals and corporate restructuring costs, and movements in restricted cash.

### RECONCILIATIONS

A reconciliation of cost of sales as included in AngloGold Ashanti's financial and operational update for the three months ended 31 December 2024 and 31 December 2023, and the years ended 31 December 2024 and 31 December 2023 to "all-in sustaining costs", "all-in sustaining costs per ounce", "all-in costs", "all-in costs per ounce", "total cash costs" and "total cash costs per ounce" for each of the three-month periods ended 31 December 2024 and 31 December 2023, and each of the years ended 31 December 2024 and 31 December 2023 is presented on a total (Group), total (managed operations/non-managed joint ventures) and segment basis in Note A below. In addition, the Company has provided detail of the consolidated ounces of gold produced and sold by mine for each of those periods below.

A reconciliation of gold income as included in AngloGold Ashanti's financial and operational update for the three months ended 31 December 2024 and 31 December 2023, and the years ended 31 December 2024 and 31 December 2023 to "average gold price received per ounce" for each of the three-months ended 31 December 2024 and 31 December 2023, and each of the years ended 31 December 2024 and 31 December 2023 is presented on a total (Group) and total (managed operations/non-managed joint ventures) basis in Note B below.

A reconciliation of capital expenditure as included in AngloGold Ashanti's financial and operational update for the three months ended 31 December 2024 and 31 December 2023, and the years

CONTINUED

ended 31 December 2024 and 31 December 2023 to “sustaining capital expenditure” and “non-sustaining capital expenditure” for each of the three-month periods ended 31 December 2024 and 31 December 2023, and each of the years ended 31 December 2024 and 31 December 2023 is presented on a total (Group), total (managed operations/non-managed joint ventures) and segment basis in Note C below.

A reconciliation of profit (loss) before taxation as included in AngloGold Ashanti’s financial and operational update for the three months ended 31 December 2024 and 31 December 2023, and the years ended 31 December 2024 and 31 December 2023, to “Adjusted EBITDA” for each of the three-month periods ended 31 December 2024 and 31 December 2023, and each of the years ended 31 December 2024 and 31 December 2023 is presented on a total (Group) basis in Note D below.

A reconciliation of total borrowings as included in AngloGold Ashanti’s financial and operational update as at 31 December 2024 and 31 December 2023 to “Adjusted net debt” as at 31 December 2024 and 31 December 2023 is presented on a total (Group) basis in Note E below.

A reconciliation of net cash flow from operating activities as included in AngloGold Ashanti’s financial and operational update for the three months ended 31 December 2024 and 31 December 2023, and the years ended 31 December 2024 and 31 December 2023 to “free cash flow” for each of the three-month periods ended 31 December 2024 and 31 December 2023, and each of the years ended 31 December 2024 and 31 December 2023 is presented on a total (Group) basis in Note F below.

<sup>(1)</sup> In addition to the operational performances of the mines, "all-in sustaining costs per ounce", "all-in costs per ounce" and "total cash costs per ounce" are affected by fluctuations in the foreign currency exchange rate. AngloGold Ashanti reports "all-in sustaining costs per ounce" and "all-in costs per ounce" calculated to the nearest US dollar amount and gold sold in ounces. AngloGold Ashanti reports "total cash costs per ounce" calculated to the nearest US dollar amount and gold produced in ounces. "All-in sustaining costs (per ounce)", "all-in costs (per ounce)" and "total cash costs (per ounce)" may not be calculated based on amounts presented in this table due to rounding.

<sup>(2)</sup> Refer to Segmental reporting.

<sup>(3)</sup> Corporate includes non-gold producing managed operations.

<sup>(4)</sup> Total including equity-accounted non-managed joint ventures.

<sup>(5)</sup> "Total cash costs", "all-in sustaining costs" and "all-in costs" may not be calculated based on amounts presented in this table due to rounding.

<sup>(6)</sup> Adjusted to exclude the Sukari operation which was acquired on 22 November 2024 as part of the Centamin acquisition.

Rounding of figures may result in computational discrepancies.

<sup>(1)</sup> Equity-accounted joint venture.

<sup>(2)</sup> Adjusted to exclude the Córrego do Sítio (CdS) operation which was placed on care and maintenance in August 2023.

<sup>(3)</sup> Includes gold concentrate from the Cuiabá mine sold to third parties.

<sup>(4)</sup> On a consolidated basis. Siguiiri, Sukari and Cerro Vanguardia are owned 85%, 50% and 92.50% by AngloGold Ashanti, respectively.

Rounding of figures may result in computational discrepancies.

During the financial year ended 31 December 2024, AngloGold Ashanti's reporting for managed operations shifted from an attributable basis of reporting to a consolidated basis of reporting. The change in reporting only impacts managed operations with non-controlling interests (i.e., Siguiiri, Cerro Vanguardia and Sukari), whereas joint operations (i.e., Tropicana), which are proportionately consolidated, remain unaffected. Non-managed joint ventures (i.e., Kibali), which are accounted for under the equity method, also remain unaffected and their gold production, related unit revenue and cost metrics continue to be reported on an attributable basis. As a result of this change in reporting, certain adjustments to exclude non-controlling interests on gold production, related unit revenue and cost metrics have been discontinued. The metrics for the three months and year ended 31 December 2023 have been adjusted to reflect this change in reporting.

AngloGold Ashanti posts information that may be important to investors on the main page of its website at [www.anglogoldashanti.com](http://www.anglogoldashanti.com) and under the "Investors" tab on the main page. This information is updated periodically. AngloGold Ashanti intends to use its website as a means of disclosing material non-public information to the public in a broad, non-exclusionary manner and for complying with its disclosure obligations. Accordingly, investors should visit this website regularly to obtain important information about AngloGold Ashanti, in addition to following its press releases, documents it files with, or furnishes to, the United States Securities and Exchange Commission (SEC) and public conference calls and webcasts. No material on the AngloGold Ashanti website forms any part of, or is incorporated by reference into, this document. References herein to the AngloGold Ashanti website shall not be deemed to cause such incorporation.

PUBLISHED BY ANGLOGOLD ASHANTI

**FORWARD-LOOKING | STATEMENTS**

Certain statements contained in this document, other than statements of historical fact, including, without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices, production, total cash costs, all-in sustaining costs, all-in costs, cost savings and other operating results, return on equity, productivity improvements, growth prospects and outlook of AngloGold Ashanti's operations, individually or in the aggregate, including the achievement of project milestones, commencement and completion of commercial operations of certain of AngloGold Ashanti's exploration and production projects and the completion of acquisitions, dispositions or joint venture transactions, AngloGold Ashanti's liquidity and capital resources and capital expenditures, the consequences of the COVID-19 pandemic and the outcome and consequences of any potential or pending litigation or regulatory proceedings or environmental, health and safety issues, are forward-looking statements regarding AngloGold Ashanti's financial reports, operations, economic performance and financial condition. These forward-looking statements or forecasts are not based on historical facts, but rather reflect our current beliefs and expectations concerning future events and generally may be identified by the use of forward-looking words, phrases and expressions such as "believe", "expect", "aim", "anticipate", "intend", "foresee", "forecast", "predict", "project", "estimate", "likely", "may", "might", "could", "should", "would", "seek", "plan", "scheduled", "possible", "continue", "potential", "outlook", "target" or other similar words, phrases, and expressions; *provided* that the absence thereof does not mean that a statement is not forward-looking. Similarly, statements that describe our objectives, plans or goals are or may be forward-looking statements. These forward-looking statements or forecasts involve known and unknown risks, uncertainties and other factors that may cause AngloGold Ashanti's actual results, performance, actions or achievements to differ materially from the anticipated results, performance, actions or achievements expressed or implied in these forward-looking statements. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements and forecasts are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results, performance, actions or achievements could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic, social, political and market conditions, including related to inflation or international conflicts, the success of business and operating initiatives, changes in the regulatory environment and other government actions, including environmental approvals, fluctuations in gold prices and exchange rates, the outcome of pending or future litigation proceedings, any supply chain disruptions, any public health crises, pandemics or epidemics (including the COVID-19 pandemic), the failure to maintain effective internal control over financial reporting or effective disclosure controls and procedures, the inability to remediate one or more material weaknesses, or the discovery of additional material weaknesses, in the Company's internal control over financial reporting, and other business and operational risks and challenges and other factors, including mining accidents. For a discussion of such risk factors, refer to AngloGold Ashanti's annual report on Form 20-F for the financial year ended 31 December 2023 filed with the United States Securities and Exchange Commission (SEC). These factors are not necessarily all of the important factors that could cause AngloGold Ashanti's actual results, performance, actions or achievements to differ materially from those expressed in any forward-looking statements. Other unknown or unpredictable factors could also have material adverse effects on AngloGold Ashanti's future results, performance, actions or achievements. Consequently, readers are cautioned not to place undue reliance on forward-looking statements. AngloGold Ashanti undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events, except to the extent required by applicable law. All subsequent written or oral forward-looking statements attributable to AngloGold Ashanti or any person acting on its behalf are qualified by the cautionary statements herein.

**Non-GAAP financial measures**

This communication may contain certain "Non-GAAP" financial measures. AngloGold Ashanti utilises certain Non-GAAP performance measures and ratios in managing its business. Non-GAAP financial measures should be viewed in addition to, and not as an alternative for, the reported operating results or cash flow from operations or any other measures of performance prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures other companies may use.
