Skylight™

**BUILDING PERFORMANCE
& OPERATIONS PLATFORM**

FROM **Site 10**01™

Skylight for:

SMART CITIES

Smart cities can't exist without smart buildings.

Skylight is more than just buildings, Skylight is about possibilities. Smart cities need smart buildings, and Skylight by Site 1001 is the big data platform that helps buildings become "smart."

Get Connected

Designed for hotels, offices, and public venues, Skylight's A.I.-backed, cloud-based platform lets users combine and use Place Data—information from internal occupant commentary, building systems, IoT sensors, financials, third-party apps, weather, traffic, and more—to connect buildings to cities, and make them truly "smart."

Know What's Coming Next

A.I. and machine learning are built into Skylight. That means Skylight buildings can warn for potential problems, adapt to place conditions, like occupancy changes or an emergency event, and even talk with building occupants via its voice-based A.I., Carl. With Skylight, you know *everything* that's happening now, so tomorrow can be made better.

YOU CAN'T HAVE SMART CITIES WITHOUT

SMART BUILDINGS.

SPECIALIZED SOLUTIONS FOR SMART CITIES

A platform that connects and uses all of the data that matter in cities.

Automated alerts & actions for changes in place conditions.

Engagement with occupants to owners via voice-controlled UI.

Be Happy, Healthy, and Productive

Skylight makes it possible to share smart information between places and mix it with city transportation systems, weather data, event planning, smart cars, drone delivery and so much more. And with Skylight, places adapt to people, not the other way around. The more information Skylight gets, the smarter it becomes and your places, and the people living in them, are better for it. Comfortable, energy-efficient cities that make buildings and people measurably healthier? Sounds like a Skylight place.

THE SKYLIGHT PLATFORM

Skylight optimizes building performance and operations through its AI-backed, cloud-based big data platform. Building professionals use Skylight to create better places through smarter building management and community connection. Skylight translates core building and operational data into information to maximize satisfaction, lower operational costs, increase asset longevity and enhance property value.
